it is impossible to perceive the innumerable stimuli impinging on our senses all at once out of the myriad stimuli external and internal a few are selected for further processing and even among these we try to put each in some sort of relation with the others to be able to make some sense about them all time of course is an elementary dimension we use to organize our experiences thus the perception of sequences is basic to human cognition nevertheless research addressing sequences is rather sparse partly this is due to difficulty in designing experiments in this area due to huge individual differences then there is the assumption that temporal order has more to do with memory than perception another problem is that sequences seem endemic to the auditory world so much so that some researchers have suggested that sound provides the auditory scaffolding for sequencing behavior little wonder that research studies addressing sequences in modalities other than audition are extremely rare this research topic aimed to gather a holistic picture of sequencing behaviour among humans by collecting snapshots of the current research on the topic of sequencing we particularly sought contributions which addressed sequences beyond the auditory modality the single unifying criteria for these diverse contributions was that they shed new light on previously unexplored empirical relationships and or provoked new lines of research with incisive ideas regarding sequencing behavior seasoned researchers contributed their views on perception memory and production of sequences

the latest edition of the gold standard in school neuropsychology references in the newly revised second edition of best practices in school neuropsychology guidelines for effective practice assessment and evidence based intervention a team of psychological experts delivers a thoroughly updated treatment of modern issues and challenges in school neuropsychology the editors provide comprehensive discussions of current assessment and intervention models best practices in assessing cognitive processes and the important task of collaborating with parents educators and other professionals this latest edition includes explorations of the unique challenges posed by working with culturally diverse student populations clinical advice for learning specialists and neuropsychologists engaged with special populations and students with academic disabilities processing deficits or medical disorders new chapters on assessment and intervention with children suffering from trauma or substance abuse perfect for psychologists neuropsychologists clinicians and academics working in or studying school environments best practices in school neuropsychology is a must read reference for practitioners working with children and students who seek a one stop reference for evidence informed assessment and intervention guidelines

expert guidance on the features of dyslexia and the most effective treatment options essentials of dyslexia assessment and intervention allows psychologists graduate students reading specialists and others to quickly acquire the knowledge and skills

needed to treat individuals struggling with dyslexia this book provides step by step guidance on accurately identifying assessing and using evidence based interventions with individuals with dyslexia addressing the components that need to be considered in the assessment of dyslexia both cognitive and academic this book includes descriptions of the various tests used in a comprehensive dyslexia assessment along with detailed evidence based interventions that professionals and parents can use to help individuals struggling with dyslexia a part of the trusted essentials of psychological assessment series this book features concise chapters designed to facilitate retention of key concepts with callout boxes bullet points and extensive illustrations additionally the chapters contain questions to test your knowledge and reinforce what you have learned this updated second edition covers essential topics for today s professionals including genetic factors reading instruction technology and dyslexia in schools gain an understanding of the neurological and genetic causes and risk factors of dyslexia assess reading fluency phonological awareness and other markers of dyslexia discover the latest interventions for improving reading and spelling in individuals with dyslexia learn to pick up on cues that help with early identification and treatment of dyslexia providing an in depth look at dyslexia this straightforward book presents information that will prepare school psychologists neuropsychologists educational diagnosticians special education teachers as well as general education teachers to recognize assess and provide effective treatment programs for dyslexia the book is also a good resource for parents who are helping a child with dyslexia

efficient auditory processing requires the rapid integration of transient sensory inputs this is exemplified in human speech perception in which long stretches of a complex acoustic signal are typically processed accurately and essentially in real time spoken language thus presents listeners auditory systems with a considerable challenge even when acoustic input is clear however auditory processing ability is frequently compromised due to congenital or acquired hearing loss or altered through background noise or assistive devices such as cochlear implants how does loss of sensory fidelity impact neural processing efficiency and health how does this ultimately influence behavior this research topic explores the neural consequences of hearing loss including basic processing carried out in the auditory periphery computations in subcortical nuclei and primary auditory cortex and higher level cognitive processes such as those involved in human speech perception by pulling together data from a variety of disciplines and perspectives we gain a more complete picture of the acute and chronic consequences of hearing loss for neural functioning

two noted researchers explain scientific evidence that shows why certain experiential and lifestyle factors may promote and maintain cognitive vitality in older adults although

our physical abilities clearly decline as we age cognitive decline in healthy old age is neither universal nor inevitable in nurturing the older brain pamela greenwood and raja parasuraman show that scientific research does not support the popular notion of the inexorable and progressive effects of cognitive aging in all older adults they report that many adults maintain a high level of cognitive function into old age and that certain experiential and lifestyle factors including education exercise diet and opportunities for new learning contribute to the preservation of cognitive abilities many popular accounts draw similar conclusions and give similar lifestyle advice but lack supporting scientific evidence greenwood and parasuraman offer a comprehensive review of research on cognitive and brain aging they show that even the aged brain remains capable of plasticity the ability to adapt to and benefit from experience and they summarize evidence that brain plasticity is heightened by certain types of cognitive training by aerobic exercise and by certain diets they also report on the somewhat controversial use of estrogen and cognition enhancing drugs on environmental adaptations including virtual assistants that help older adults age in place and on genetic factors in cognitive aging the past twenty years of research points to ways that older adults can lead rich and cognitively vital lives as millions of baby boomers head toward old age greenwood and parasuraman s accessible book could not be more timely

this volume is based on a conference held at dartmouth college s minary conference center in holdemess new hampshire june 4 7 1981 the conference brought together a number of investigators whose separate lines of inquiry bear in significant ways on the relationships among perception cognition and development the purpose was to consider interactions among these basic processes not only as a critical facet of the research programs of the participants but also as a central conceptual problem for current theoretical psychology first published in 1983 routledge is an imprint of taylor francis an informa company

spatial hearing ability has been found to vary widely across listeners a survey of the existing auditory space perception literature suggests that three main types of factors may account for this variability physical factors e g acoustical characteristics related to sound localization cues perceptual factors e g sensory cognitive processing perceptual learning multisensory interactions and methodological factors e g differences in stimulus presentation methods across studies however the extent to which these and perhaps other still unidentified factors actually contribute to the observed variability in spatial hearing across individuals with normal hearing or within special populations e g hearing impaired listeners remains largely unknown likewise the role of perceptual learning and multisensory interactions in the emergence of a multimodal but unified representation of auditory space is still an active topic of research a better characterization and understanding of the determinants of inter individual variability in spatial hearing and of its relationship with perceptual learning and multisensory interactions would have

numerous benefits in particular it would enhance the design of rehabilitative devices and of human machine interfaces involving auditory or multimodal space perception such as virtual auditory multimodal displays in aeronautics or navigational aids for the visually impaired for this research topic we have considered manuscripts that present new methods or review existing methods for the study of inter individual differences present new data or review existing data concerning acoustical features relevant for explaining inter individual differences in sound localization performance present new or review existing psychophysical or neurophysiological findings concerning spatial hearing and or auditory perceptual learning and or multisensory interactions in humans normal or impaired young or older listeners or other species discuss the influence of inter individual differences on the design and use of assistive listening devices rehabilitation or human machine interfaces involving spatial hearing or multimodal perception of space ergonomics

with higher education turning towards data analytics as the next big advance in technology it is important to look at how information is gathered and visualized for accurate comprehension analysis and decision making packaging digital information for enhanced learning and analysis data visualization spatialization and multidimensionality brings together effective practices for the end to end capture and web based presentation of information for comprehension analysis and decision making this publication is beneficial for educators trainers instructional designers web designers and graduate students interested in improving analytical tools
