positive psychology is the scientific study of what goes right in life from birth to death and at all stops in between it is a newly christened approach within psychology that takes seriously as a subject matter those things that make life most worth living everyones life has peaks and valleys and positive psychology does not deny the valleys its signature premise is more nuanced but nonetheless important what is good about life is as genuine as what is bad and therefore deserves equal attention from psychologists positive psychology as an explicit perspective has existed only since 1998 but enough relevant theory and research now exist concerning what makes life most worth living to fill a book suitable for a semester long college course this is that book and it covers the topics of concern to this new field

grapevine is a crop of major economical interest and wine represents a multicultural heritage which has been growing since several milleniums yet modern viticulture must face several challenges global climate has increased berry sugar content and alcohol in the wine whereas phenolic and aromatic ripeness are not always achieved water supply is becoming shorter new varieties better adapted to new climatic conditions might have to be planted which may affect wine typicity phytochemical treatments are more controlled and the consumer pays increasing attention to environmentally safe practices new methods reducing pesticide use but maintaining yield and typicity must be designed the present book illustrates the recent progress made in ecophysiology molecular and cell biology and pathology of grapevine as well as in precision viticulture and berry composition combination of these new tools with field observations will undoubtly make it easier to face the challenges described above these multidisciplinary contributions will be of interest to anyone involved in grapevine and wine activities

genome exploitation data mining the genome is developed from the 23rd stadler genetic symposium this volume discusses and illustrates how scientists are going to characterize and make use of the massive amount of information being accumulated about the plant and animal genomes genome exploitation data mining the genome is a state of the art picture on mining the genome databases this is one of the few times that researchers in both plants and animals will be working together to create a seminal data resource
