this volume brings forth a set of selected papers from the conference on modeling land battle systems for military planning sponsored by the special programme panel on systems science of the nato science committee the conference took place in ottobrunn germany at the war gaming centre of industrie anlagen betriebs gesellschaft the idea to organize a conference on land battle system models was first suggested to me in 1972 by andreas mortensen then a member of the norwegian defence research establishment and presently at the shape technical centre when we discussed the apparent inconsistencies of various evaluations of force capability within nato frequently decision makers are confronted by contradictory results of different studies addressing essentially the same problem leaving them with the impression that the tools of systems analysis and operations research may not be very objective guides however experienced systems researchers know that a detailed comparison of models their assumptions and inputs would generally show that results are not really contradictory but not only seem the decision processes in large national and international organizations to be such that a comparison can hardly ever be accomplished also the documentation available is rarely sufficient to really comprehend the differences in results for these reasons we felt that an effort to review the state of the art of modeling in support of force capability assessments was overdue

much of the work that has been done in the last fifty years in the area of decision analysis has been concerned with situations in which formal mathematical models of the decision process can be used for example deterministic models of operations research have been used as a means of treating decisions under conditions of certainty statistical decision theory has been applied to decision making under conditions of uncertainty and risk some attempts have been made to treat decisions under conditions of competition by methods derived from game theory however many of the decisions that we meet today in business and in our daily lives do not fall conveniently into the areas covered by these models many modern decisions are ill structured by nature these decisions have been called wicked in comparison to the tame decisions that yield to formal analytical treatment complex decision situations are found in every aspect of our lives today they are normally centred around an issue opportunity venture or threat that involves an individual or an organization on the

one hand and other participants on the other hand the issue in such a situation might involve for example the proposed move of the head office of a corporation from one political jurisdiction to another it might be concerned with the opportunities and new ventures that would arise with the introduction of a new and different type of product or service into an organization

for centuries the world has witnessed the development and use of increasingly complex and powerful military systems and technologies in the process the art of war has truly become the art of combined arms warfare in which infantry artillery air support intelligence and other key elements are all coordinated for maximum effect nowhere has this trend been more visible than in the history of twentieth century warfare originally published as an essential in house study for u s army officers during the 1980s this much revised and expanded edition remains the most complete study available on the subject rewritten with a much wider readership in mind it both retains its enormous practical utility for military professionals and provides a valuable and appealing introduction for scholars and general readers jonathan house author of the original work brings the story of combined arms up to the present covering among other things desert storm the war in chechnya and the rise of smart weapons and related technologies he traces the evolution of tactics weapons and organization in five major militaries american british german russian and french over 100 years of warfare revealing both continuities and contrasts within and between these fighting forces he also provides illuminating glimpses of israeli and japanese contributions to combined arms doctrine expanding his insightful analysis of the world wars and the wars in korea and vietnam house also offers much new material focused on the post vietnam period throughout he analyzes such issues as command and control problems of highly centralized organizations the development of special operations forces advances in weapons technology including ballistic and anti ballistic missile systems the trade offs involved in using heavy versus light armed forces and the

enduring obstacles to effective cooperation between air and land forces his strong critique of the air superiority propaganda that came out of the gulf war is sure to spark some heated debates rigorously comparative house s study addresses significant questions about how nations prepare for war learn or don t learn its harsh lessons and adapt to changing times and technologies unique in the annals of the literature on warfare it will be the standard work on this subject for a long time to come

some will be shocked to find out that the united states and ho chi minh our nemesis for much of the vietnam war were once allies indeed during the last year of world war ii american spies in indochina found themselves working closely with ho chi minh and other anti colonial factions compelled by circumstances to fight together against the japanese dixee bartholomew feis reveals how this relationship emerged and operated and how it impacted vietnam s struggle for independence although the oss did not bring ho chi minh to power bartholomew feis shows that its apparent support for the viet minh played a significant symbolic role in helping them fill the power vacuum left in the wake of japan s surrender her study also hints that had america continued to champion the anti colonials and their quest for independence rather than caving in to the french we might have been spared our long and very lethal war in vietnam based partly on interviews with surviving oss agents who served in vietnam bartholomew feis s engaging narrative and compelling insights speak to the yearnings of an oppressed people and remind us that history does indeed make strange bedfellows
