what is philosophy philosophy over the years has been considered by the average college student as a part of education reserved for someone doing a doctoral dissertation and therefore of limits to them whether this has been a reasonable position to take seems on the surface to be a good question to pursue for in many high schools philosophy is not taught and so it remains a dark area of the educational field which only the brave dare to trod nevertheless my view of philosophy when summed up is that it is merely a well thought out position coined in several words and used to state what one believes in is prepared to live by does live by will die for and can defend successfully at any intellectual level the experts however offer the following norman l geisler and paul d feinberg1 in their text introduction to philosophy says the logical place to begin is with a definition of this discipline however even the coming up with a definition proves to be a complex philosophical question some experts regard philosophy as the uno numero of all the sciences while others still don t accept it as a science some contend that philosophy reveals information upon inquiry of those things that comprise the ultimate things of the world while others don t even regard it as such a serious discipline of inquiry others see it as an activity of rationality with its central theme being to critically evaluate evidence of a phenomena but to this argument some hold that reason is not essential or indeed there is no pursuit to an all convincing theme or argument in philosophy

published in 1998 the main aim of this book is to use a naturalistic evolutionary approach to solve some of the most important problems in philosophy the first two problems come from the philosophy of science the problem of rationality of science and the problem of truth in science in presenting the first problem the author argues that the views of kuhn and feyerabend do create a very serious challenge to traditional epistemology however if the assumption of individual rationality is abandoned in favour of the author s social concept of rationality a committed naturalism can account for science as a rational activity in tackling the second problem of truth the author shows that a committed evolutionary philosophy does not support realism but leads instead to a thorough evolutionary relativism of

scientific knowledge it is nevertheless possible to use this evolutionary relativism to construct a theory of relative truth the issue of whether science discovers truth has also been tied to absolutism that a well formulated theory of relative truth is likely to bring about a profound transformation of the way we think about the field the author explores the notion of relative truth in the philosophy of science ethics and aesthetics
