the first of two volumes in the electronic design automation for integrated circuits handbook second edition electronic design automation for ic system design verification and testing thoroughly examines system level design microarchitectural design logic verification and testing chapters contributed by leading experts authoritatively discuss processor modeling and design tools using performance metrics to select microprocessor cores for integrated circuit ic designs design and verification languages digital simulation hardware acceleration and emulation and much more new to this edition major updates appearing in the initial phases of the design flow where the level of abstraction keeps rising to support more functionality with lower non recurring engineering nre costs significant revisions reflected in the final phases of the design flow where the complexity due to smaller and smaller geometries is compounded by the slow progress of shorter wavelength lithography new coverage of cutting edge applications and approaches realized in the decade since publication of the previous edition these are illustrated by new chapters on high level synthesis system on chip soc block based design and back annotating system level models offering improved depth and modernity electronic design automation for ic system design verification and testing provides a valuable state of the art reference for electronic design automation eda students researchers and professionals

pseudo static analysis is still the most used method to assess the stability of geotechnical systems that are exposed to earthquake forces however this method does not provide any information about the deformations and permanent displacements induced by seismic activity moreover it is questionable to use this approach when geotechnical systems are affected by frequent and rare seismic events incidentally the peak ground acceleration has increased from 0 2 0 3 g in the seventies to the current value of 0 6 0 8 g therefore a shift from the pseudo static approach to performance based analysis is needed over the past five years considerable progress has been made in earthquake geotechnical engineering design eged the most recent advances are presented in this book in 6 parts the evaluation of the site amplification is covered in part i of the book in part ii the evaluation of the soil foundation stability against natural slope failure and liquefaction is treated in the following 3 parts of the book the eged for different geotechnical systems is presented as follows the design of levees and dams including natural slopes in part iii the design of foundations and soil structure interaction analysis in part iv underground structures in part v finally in part vi new topics like the design of reinforced earth retaining walls and landfills are covered

for more than 40 years computerworld has been the leading source of technology news and information for it influencers worldwide computerworld s award winning site computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global it media network

this three volume set provides the complete proceedings of the ninth international conference on human computer interaction held august 2001 in new orleans a total of 2 738 individuals from industry academia research institutes and governmental agencies from 37 countries submitted their work for presentation at the conference the papers address the latest research and application in the human aspects of design and use of computing systems those accepted for presentation thoroughly cover the entire field of human computer interaction including the cognitive social ergonomic and health aspects of work with computers the papers also address major advances in knowledge and effective use of computers in a variety of diversified application areas including offices financial institutions manufacturing electronic publishing construction and health care
