this book resulted from two reports published in 1928 and 1932 of the committee on rational transformations  
established by the national research council the purpose of the reports was to give a comprehensive survey of the  
literature on the subject each chapter is regarded as a separate unit that can be read independently

for anyone interested in the history and effects of the introduction of so called modern mathematics or  
mathématique moderne or new mathematics etc this book by dirk de bock and geert vanpaemel is essential reading  
the two authors are experienced and highly qualified belgian scholars and the book looks carefully at events relating  
to school mathematics for the period from the end of world war ii to 2010 initially the book focuses on events which  
helped to define the modern mathematics revolution in belgium before and during the 1960s the book does much  
more than that however for it traces the influence of these events on national and international debates during the  
early phases of the reform by providing readers with translations into english of relevant sections of key continental  
documents outlining the major ideas of leading continental scholars who contributed to the mathématique moderne  
movement this book makes available to a wide readership the theoretical social and political backdrops of  
continental new mathematics reforms in particular the book focuses on the contributions made by belgians such as  
paul libois willy servais Frédérique Lenger and Georges Papy the influence of modern mathematics fell away rapidly in  
the 1970s however and the authors trace the rise and fall from that time into the 21st century of a number of other  
approaches to school mathematics in belgium in other western european nations and in north america in summary

this is an outstanding landmark publication displaying the fruits of deep scholarship and careful research based on extensive analyses of primary sources
