arthur spiethoff 1873 1957 an economist of the german historical school of economics is best known for his theory of the business cycle despite spiethoff calling for a unified reading of his work his epistemological thinking has received less attention this book addresses that gap by analysing spiethoff s theory of the business cycle in the light of his epistemological views putting spiethoff s work in context the book also investigates the most significant features of the evolution of the research programme of the german historical school of economics with particular reference to the relationships between schmoller sombart weber and spiethoff in addition spiethoff s work is compared with some of the scientific orientations of the current debates on the epistemological side the book examines the relationship between spiethoff s views and some contemporary thinking on scientific realism as well as methodological pluralism in social sciences and more broadly it emphasises the analytical relevance of the historical approach in explaining the economic imbalances of contemporary capitalism questioning the idea widespread in the neoclassical approach that taking historical specificities into account makes it hard to achieve a theoretically effective attitude this book is a significant addition to the literature on the german historical school of economics and the history of economic thought business cycle theory and macroeconomics more broadly
