a series of six books for classes ix and x according to the cbse syllabus

shock compression and chemical reaction of multifunctional energetic structural materials provides an exhaustive overview of the mechanics kinetics and physio chemical behavior caused by shock induced reaction and shock compression on multifunctional energetic structural materials mesms the book covers foundational knowledge on shock waves and equation of state eos shock parameters reaction kinetics impedance matching and more in addition it looks at more advanced subjects such as experimental analysis methods numerical modeling techniques from quasi static to high strain rates including void collapse models how eos changes when reaction and detonation are involved and more final chapters cover how to obtain eos curves from experiments and various testing methods and numerical models for non reactive porous solids and particulate composites including 1 d reactive flow models flyer plate impact experiments are also discussed as are the applications of hydrocodes and lagrangian framework based methods provides an ideal balance of modeling concepts and experimental techniques looks at mechanical testing processes of mesms outlines sample preparation testing of samples obtaining eos from the testing and using eos for simulation covers modeling for pore collapse constituent material and at a granular level

this book is structured to align with the latest syllabus and curriculum guidelines ensuring that the content is both relevant and rigorous each chapter begins with a clear set of learning objectives providing a roadmap for students to understand what they will achieve by the end of the chapter we have included numerous diagrams illustrations and real life examples to make complex concepts more accessible and engaging to support the diverse learning needs of students this textbook includes a variety of pedagogical features

chemical reactions at high pressures are widely used in modern technology supercritical extraction is an example on the other hand critical phenomena is the more advanced field in statistical mechanics there are thousands of theoretical and experimental articles published by physicists chemists biologists chemical engineers and material scientists but to our knowledge there are no books which link these two phenomena together this book sums up the results of 222 published articles both theoretical and experimental which will be of great benefit to students and all researchers working in this field

chemical kinetics the study of reaction rates in solution kenneth a connors this chemical kinetics book blends physical theory phenomenology and empiricism to provide a guide to the experimental practice and interpretation of reaction kinetics in solution it is suitable for courses in chemical kinetics at the graduate and advanced undergraduate levels this book will appeal to students in physical organic chemistry physical inorganic chemistry biophysical chemistry biochemistry pharmaceutical chemistry and water chemistry all fields concerned with the rates of chemical reactions in the solution phase
