it's a masterpiece of course but more than that it shows that there is some such thing as being a simple observer nicci french independent it was 1932 when joseph mitchell first came across joe gould a harvard educated vagrant of greenwich village penniless filthy scurrilous charming thieving joe gould was widely considered a genius he was working on a book he called an oral history the longest book ever written he claimed formed of recorded conversations set down in exercise books of course when gould died the great epic was nowhere to be found this compelling portrait of a true new york eccentric a man who embodied the disconnected delusional nature of real life was mitchell's personal enquiry into the agony of writer's block joe gould's secret can be found in the longer collection of mitchell's writing up in the old hotel

for most of literary history personal confessions about illness were considered too intimate to share publicly by the mid twentieth century however a series of events set the stage for the emergence of the illness narrative the increase of chronic disease the transformation of medicine into big business the women s health movement the aids hiv pandemic the advent of inexpensive paperbacks and the rise of self publishing all contributed to the proliferation of narratives about encounters with medicine and mortality while the illness narrative is now a staple of the publishing industry the genre itself has posed a problem for literary studies what is the role of criticism in relation to personal accounts of suffering can these narratives be judged on aesthetic grounds are they a collective expression of the lost intimacy of the patient doctor relationship is their function thus instrumental to elicit the reader s empathy to answer these questions ann jurecic turns to major works on pain and suffering by susan sontag elaine scarry and eve sedgwick and reads these alongside illness narratives by jean dominique bauby reynolds price and anne fadiman among others in the process she defines the subgenres of risk and pain narratives and explores a range of critical responses guided alternately by narrative empathy the hermeneutics of suspicion and the practice of reparative reading illness as narrative seeks to draw wider attention to this form of life writing and to argue for new approaches to both literary criticism and teaching narrative jurecic calls for a practice that s both compassionate and critical she asks that we consider why writers compose stories of illness how readers receive them and how both use these narratives to make meaning of human fragility and mortality

our health care system is crippled by desperate efforts to prevent the inevitable a third of the national medicare budget nearly 175 billion is spent on the final year of life and a third of that amount on the final month often on expensive and futile treatments such efforts betray a fundamental flaw in how we think about healthcare we squander resources on hopeless situations instead of using them to actually improve health in predictive health distinguished doctors kenneth brigham and michael m e johns propose a solution invest earlier and use science and technology to make healthcare more available and affordable every child would begin life with a post natal genetic screen when potential risk say for type ii diabetes or heart disease would be found more data on biology behavior and environment would be captured throughout her life using this information health care workers and the people they care for could forge personal strategies for healthier living long before a small glitch blows up into major disease this real health care wouldn t just replace much of modern disease care it would make it obsolete the result according to brigham and johns will be a life defined by a long stay at top physical and mental form rather than an early peak and long decline accomplishing this goal will require new tools new clinics fewer doctors and more mentors smarter companies and engaged patients in short it will require a revolution thanks to a decade long collaboration between

brigham johns and others it is already underway an optimistic plan for reducing or eliminating many chronic diseases as well as reforming our faltering medical system predictive health is a deeply knowledgeable deeply humane proposal for how we can reallocate expenses and resources to prolong the best years of life rather than extending the worst

how is medical knowledge made new methods for research and clinical care have reshaped the practices of medical knowledge production over the last forty years consensus conferences evidence based medicine translational medicine and narrative medicine are among the most prominent new methods making medical knowledge explores their origins and aims their epistemic strengths and their epistemic weaknesses miriam solomon argues that the familiar dichotomy between the art and the science of medicine is not adequate for understanding this plurality of methods the book begins by tracing the development of medical consensus conferences from their beginning at the united states national institutes of health in 1977 to their widespread adoption in national and international contexts it discusses consensus conferences as social epistemic institutions designed to embody democracy and achieve objectivity evidence based medicine which developed next ranks expert consensus at the bottom of the evidence hierarchy thus challenging the authority of consensus conferences evidence based medicine has transformed both medical research and clinical medicine in many positive ways but it has also been accused of creating an intellectual hegemony that has marginalized crucial stages of scientific research particularly scientific discovery translational medicine is understood as a response to the shortfalls of both consensus conferences and evidence based medicine narrative medicine is the most prominent recent development in the medical humanities its central claim is that attention to narrative is essential for patient care solomon argues that the differences between narrative medicine and the other methods have been exaggerated and offers a pluralistic account of how the all the methods interact and sometimes conflict the result is both practical and theoretical suggestions for how to improve medical knowledge and understand medical controversies
