one of the current main challenges in the area of scientific computing is the design and implementation of accurate numerical models for complex physical systems which are described by time dependent coupled systems of nonlinear pdes this volume integrates the works of experts in computational mathematics and its applications with a focus on modern algorithms which are at the heart of accurate modeling adaptive finite element methods conservative finite difference methods and finite volume methods and multilevel solution techniques fundamental theoretical results are revisited in survey articles and new techniques in numerical analysis are introduced applications showcasing the efficiency reliability and robustness of the algorithms in porous media structural mechanics and electromagnetism are presented researchers and graduate students in numerical analysis and numerical solutions of pdes and their scientific computing applications will find this book useful

handbook and reference guide for students and practitioners of statistical regression based analyses in r handbook of regression analysis with applications in r second edition is a comprehensive and up to date guide to conducting complex regressions in the r statistical programming language the authors thorough treatment of classical regression analysis in the first edition is complemented here by their discussion of more advanced topics including time to event survival data and longitudinal and clustered data the book further pays particular attention to methods that have become prominent in the last few decades as increasingly large data sets have made new techniques and applications possible these include regularization methods smoothing methods tree based methods in the new edition of the handbook the data analyst s toolkit is explored and expanded examples are drawn from a wide variety of real life applications and data sets all the utilized r code and data are available via an author maintained website of interest to undergraduate and graduate students taking courses in statistics and regression the handbook of regression analysis will also be invaluable to practicing data scientists and statisticians

how do interacting decision makers make strategic choices if they re rational and can

somehow predict each other's behavior they may find themselves in a nash equilibrium however humans display pervasive and systematic departures from rationality they often do not conform to the predictions of the nash equilibrium or its various refinements this has led to the growth of behavioral game theory which accounts for how people actually make strategic decisions by incorporating social preferences bounded rationality for example limited iterated reasoning and learning from experience this book brings together new advances in the field of behavioral game theory that help us understand how people actually make strategic decisions in game theoretic situations

this book presents a selective collection of papers from the 20th international symposium on computer and information sciences held in istanbul turkey the selected papers span a wide spectrum of topics in computer networks including internet and multimedia security and cryptography wireless networks parallel and distributed computing and performance evaluation these papers represent the results of the latest research of academicians from more than 30 countries

decision making dm is ubiquitous in both natural and artificial systems the decisions made often differ from those recommended by the axiomatically well grounded normative bayesian decision theory in a large part due to limited cognitive and computational resources of decision makers either artificial units or humans this state of affairs is often described by saying that decision makers are imperfect and exhibit bounded rationality the neglected influence of emotional state and personality traits is an additional reason why normative theory fails to model human dm process the book is a joint effort of the top researchers from different disciplines to identify sources of imperfection and ways how to decrease discrepancies between the prescriptive theory and real life dm the contributions consider how a crowd of imperfect decision makers outperforms experts decisions how to decrease decision makers imperfection by reducing knowledge available how to decrease imperfection via automated elicitation of dm preferences a human's limited willingness to master the available decision support tools as an additional source of imperfection how the decision maker's emotional state influences the rationality a dm support of edutainment robot based on its system of values and respecting emotions the book will appeal to anyone interested in the challenging topic of dm theory and its applications
