the anaerobic process is considered to be a sustainable technology for organic waste treatment mainly due to its lower energy consumption and production of residual solids coupled with the prospect of energy recovery from the biogas generated however the anaerobic process cannot be seen as providing the complete solution as its treated effluents would typically not meet the

desired discharge limits in terms of residual carbon nutrients and pathogens this has given impetus to subsequent post treatment in order to meet the environmental legislations and protect the receiving water bodies and environment this book discusses anaerobic treatment from the perspective of organic wastes and wastewaters municipal and industrial followed by various post treatment options for anaerobic effluent polishing and resource recovery coverage will also be from the perspective of future trends and thoughts on anaerobic technologies being able to support meeting the increasingly stringent disposal standards the resource recovery angle is particularly interesting as this can arguably help achieve the circular economy it is intended the information can be used to identify appropriate solutions for anaerobic effluent treatment and possible alternative approaches to the commonly applied post treatment techniques the succeeding discussion is intended to lead on to identification of opportunities for further research and development this book can be used as a standard reference book and textbook in universities for master and doctoral students the academic community relevant to the subject namely faculty researchers scientists and practicing engineers will find the book both informative and as a useful source of successful case studies

the mbr market continues to experience a massive growth the best practice in the field is constantly changing and unique quality requirements and management issues are regularly emerging the second edition of membrane biological reactors theory modeling design management and applications to wastewater reuse comprehensively covers the salient features and emerging issues associated with the mbr technology the book provides thorough coverage starting from biological aspects and fundamentals of membranes via modeling and design concepts to practitioners perspective and good application examples in the second edition the chapters have been updated to cover the recently emerged issues particularly the book presents the current status of the technology including market drivers restraints and development trend process fundamentals both the biological and membrane components have received in depth coverage in the new edition a new chapter has been added to provide a stronger focus on reuse applications in general and the decisive role of mbr in the entire reuse chain the second edition also comes with a new chapter containing practical design problems to complement the concepts communicated throughout the book other distinguishing features of the new edition are coverage of novel developments and hybrid processes for specialised wastewaters energy efficiency and sustainability of the process aspects of mbr process automation and recent material on case studies the new edition is a valuable reference to the academic and professional community and suitable for undergraduate and postgraduate
