the demand for safety and reliability in complex structures and mechanical systems is increasing as performance standards are escalated the costs associated with premature or unexpected component failure require a continued need to employ the latest advances in science and engineering to assess performance throughout the life cycle a significant contributor to the escalating costs of modern complex systems is that associated with the many maintenance actions required to keep the systems operational the theme of this book is the improvement in mechanical systems through the application of advanced technology emphasis is placed on developments in instrumentation and techniques for detection diagnosis and prognosis on the evaluation of materials durability and on mechanisms of failure in aircraft and industrial applications

this is the tenth edition 1954 of k d wood's airplane design despite its age it is the favorite of amateur aircraft designers because it sits on the cusp between propeller driven low subsonic airplanes and the huge increase in military performance represented by supersonic and hypersonic aircraft and in commercial value represented by high subsonic jet propelled airliners it is also situated inside the early heroic period of helicopter development and wood's knowledge of that then exotic aircraft comes out clearly he still includes wood as an aircraft material and geodetic structures and tube trusses as structural arrangements without neglecting the monocoque and semi monocoque metal structures that were then becoming more common he also covers seaplanes and flying boats a topic essentially ignored today he recognizes the potential of fiber reinforced plastics and

discusses them to the extent possible at the time this is the companion volume to k d wood s technical aerodynamics third edition this improved facsimile reprint has a new detailed table of contents accurate pagination and improvements to some of the illustrations
