over the last decade the considerable progress made in biochemistry molecular biology genetics and neuropharmacology has revealed some of the intimate mechanisms of the neurodegenerative disorders there is increasing evidence linking genetic defects affecting mitochondria to alzheimer s disease parkinson s disease amyotrophic lateral sclerosis huntington s disease and some other neurological disorders advances in knowledge are fueled through improved animal models that use mitochondrial toxins excitotoxins and transgenic animals therapeutic studies in these models have strengthened the possibility for effective treatments in man by defining the pathomechanisms we hope to be in the position to prevent cell death by protecting neurons indeed serious preclinical and clinical research is going on in the field of neuroprotection in stroke parkinson s disease epilepsy demyelinating disorders and dementia based on these scientific ideas the symposium in honour of professor abel lajtha was organized by the european society for clinicalneuropharmacology escnp and the danube symposium for neurological sciences in budapest hungary october 24 25 2002 professor lajtha was born in budapest in 1922 and his home town is an ideal venue for strengthening the bonds between western and eastern european neuroscientists professor peter riederer wurzburg held the 2002 special dezso miskolczy memorial lecture in abel lajtha s honour thanks are due to the invited speakers of this symposium for their excellent contribution laszlo vecsei vii contents advances in neuroprotection research for neurodegenerative diseases 1 mario e gotz and peter riederer neurotransmitter release in experimental stroke models the role of glutamate gaba interaction 21 laszlo g harsing jr

integrated neurosciences this textbook takes as a premise that in order to make intelligent diagnosis and provide a rational treatment in disorders of the nervous system it is necessary to develop the capacity to answer the basic questions of clinical neurology 1 where is the disease process located 2 what is the nature of the disease process the purpose of this textbook is to enable the medical student to acquire the basic information of the neurosciences and neurology and most importantly the

ability to apply that information to the solution of clinical problems the authors also suggest that hospital trips be a part of any clinical neurosciences course so that the student can put into actual practice what he has learned in the classroom we believe that this textbook will be of value to the student throughout the four years of the medical school curriculum medical psychiatry and neurology residents may also find this text of value as an introduction or review it is more true in neurology than in any other system of medicine that a firm knowledge of basic science material that is the anatomy physiology and pathology of the nervous system enables the student and physician to readily arrive at the diagnosis of where the disease process is located and the nature of the most likely pathology subsequently that knowledge may be applied to problem solving in clinical situations

a survey of over 900 trainees at the royal college of psychiatrists rcp psych in the united kingdom showed that over three quarters of psychiatry trainees desired some knowledge and training in the field of neuropsychiatry recent years have given rise to a substantial global focus on integrating neurosciences and neuropsychiatry in psychiatric training neuropsychiatry forms an important part of the psychiatric curriculum and is examined in theory and in clinical exams similarly neuropsychiatry is also of interest to neurology trainees and it is increasingly recognised that all neurology trainees should have some knowledge and experience in neuropsychiatry despite this growing interest there is a dearth of neuropsychiatry textbooks specifically geared towards trainees and other clinicians who are not specialist in the field part of the oxford textbooks in psychiatry series the oxford textbook of neuropsychiatry helps to bridge the gap between general psychiatric textbooks and reference texts in neuropsychiatry organised into four sections the book covers the basic knowledge and skills relevant to neuropsychiatry the various neuropsychiatric conditions the principles of treatment and perspectives for neuropsychiatry worldwide chapters have been written by international experts who are leaders in their own fields with the view to taking an evidence based up to date global perspective on neuropsychiatric problems and treatment the book is relevant to trainees in psychiatry neurology neurorehabilitation and also to various allied professionals in neuroscience and mental health it covers core knowledge and skills for practice in all psychiatric disciplines including core knowledge for training in neuropsychiatry the book meets curriculum requirements for various international training programmes and examinations and serves as an essential training text book for all psychiatric and neurology trainees worldwide
