this open access book provides a fresh perspective on analysis and synthesis across several areas of inquiry the two operations form a primary basis of modern laboratory science ranging from the spectrographic analysis used in practically every scientific discipline today to the naming of entire disciplines such as synthetic organic chemistry despite their acknowledged significance however the history of analysis synthesis and their relations over the longue durée is poorly understood several volumes have been devoted to the history of analysis and synthesis in the sense that premodern mathematicians and philosophers used the terms but very little work has been done on the tradition of material decomposition and recomposition and its relationship to mathematics and philosophy the

present volume brings together scholars in the history of medicine mathematics philosophy chemistry and alchemy to explore the ways in which these multiple disciplines understood and used analysis and synthesis as experimental justificatory and conceptual tools

this volume addresses both evidence of impact and impact of evidence to reveal the complex dialogue between the enterprise of teacher education and evidence of its effects in the early 21st century taking a critical position on the very notions of evidence and impact that underpin contemporary policy frameworks teacher education programs in australia and internationally are challenged by contemporary policy frameworks to demonstrate evidence of the impact they have on the capacity of graduating teachers to act with confidence and competence in school and early childhood education classrooms at the same time the field of teacher education is increasingly working to build a robust platform of research evidence that speaks to these policy frameworks and to broader issues concerning the role of teaching and teacher education in society
