food fortification the evidence ethics and politics of adding nutrients to food critically analyses mandatory food fortification as a  
technology for protecting and promoting public health increasing numbers of foods fortified with novel amounts and combinations of  
nutrients are being introduced into the food supplies of countries around the world to raise populations nutrient intakes it is a  
technology that is becoming more widely used to tackle a variety of public health problems such as micronutrient malnutrition food  
fortification policies and programs are controversial there are disputes over the ethics of food fortification as everyone who consumes  
fortified foods will be exposed to raised levels of nutrients irrespective of whether they will gain any benefit and often without their  
knowledge there are also contested views about the evidence that is available to support such activities this book discusses  
mandatory food fortification as an intervention to protect and promote public health through presenting a synthesis of the findings  
from research investigations into three topical case studies of mandatory food fortification universal salt iodisation to help prevent  
iodine deficiency disorders mandatory flour fortification with folic acid to help prevent neural tube defects and mandatory milk  
fortification with vitamin d to help prevent vitamin d deficiency each case study is assessed for its public health benefits risks and  
ethical considerations
