this ground breaking study offers new challenges to those teaching studying or developing strategies and policies in health and the environment bringing together a variety of approaches from different perspectives and different locations the contributors examine the various dimensions of health ecology in a human ecology framework examining how local regional and global factors impinge upon the health and environment of individuals communities and the globe

robin stott proposes solutions to the key problems that beset our present health system he argues that if we are to develop a true public health service rather than a disease service we must make radical changes to the decision making processes we need to acknowledge the health impact of many factors including the distribution of wealth the size of communities lifestyle issues local pollution and the condition of the whole planet the briefing shows how enhanced interaction between people can promote health social justice and environmental improvements and sets out a blueprint for local health improvement organisations

what is public health to some it is about drains water food and housing all requiring engineering and expert management to others it is the state using medicine or health education and tackling unhealthy lifestyles this book argues that public health thinking needs an overhaul a return to and modernisation around ecological principles ecological public health thinking outlined here fits the twenty first century s challenges it integrates what the authors call the four dimensions of existence the material biological social and cultural aspects of life public health becomes the task of transforming the relationship between people their circumstances and the biological world of nature and bodies for geof rayner and tim lang this is about facing a number of long term transitions some well recognized others not these transitions are demographic epidemiological urban energy economic nutrition biological cultural and democracy itself the authors argue that identifying large scale transitions such as these refocuses public health actions onto the conditions on which human and eco systems health interact making their case rayner and lang map past confusions in public health images definitions and models this is an optimistic book arguing public health can be rescued from its current dilemmas and frustrations this century s agenda is unavoidably complex however and requires stronger and more daring combinations of interdisciplinary work movements and professions locally nationally and globally outlining these in the concluding section the book charts a positive and reinvigorated institutional purpose

ecosystems and human health introduces ecohealth as an emerging field of study traces its evolution and explains its applications in cross disciplinary and holistic programs its integrative approach not only focuses on managing the environment to improve health but also analyzes underlying social and economic determinants of health to develop innovative people centered interventions

hans baer and merrill singer inventory and critically analyze the diversity of significant and sometimes devastating health implications of global warming using a range of theoretical tools from anthropology medicine and environmental sciences

the connection between environment and health has been well studied and documented

particularly by the world health organization it is now being included in some legal instruments although for the most part caselaw does not explicitly make that connection neither the right to life nor the rights to health or to normal development are actually cited in the resolution of cases and in judges decisions this volume makes the connection explicit in a broad review of human rights and legal issues associated with public health and the environment it will be particularly useful as many legal instruments emphasize the right to development without fully discussing the necessary safety and public health aspects and the respect for the ecology of any area where such development often unwanted by local or indigenous communities is to be located climate change is another pressing variable that is considered and several chapters address the interface between human health and ecological conditions overall the book integrates perspectives from a wide range of disciplines including ethics ecology public health and epidemiology and human rights and law
