somewhere and somehow in the 5 to 7 million years since the last common ancestors of humans and the great apes our ancestors got language the authors of this volume all agree that there was no single mutation or cultural innovation that took our ancestors directly from a limited system of a few vocalizations primarily innate and gestures some

learned to language they further agree to use the term protolanguage for the beginnings of an open system of symbolic communication that provided the bridge to the use of fully expressive languages rich in both lexicon and grammar but here consensus ends and the theories presented here range from the compositional view that protolanguage was based primarily on words akin to the nouns and verbs etc we know today with only syntax lacking to the holophrastic view that protolanguage used protowords which had no meaningful subunits which might nonetheless refer to complex but significantly recurrent events the present volume does not decide the matter but it does advance our understanding the lack of any direct archaeological record of protolanguage might seem to raise insuperable difficulties however this volume exhibits the diversity of methodologies that can be brought to bear in developing datasets that can be used to advance the debate these articles were originally published as interaction studies 9 1 2008

this publication is an assemblage of selected papers that have been authored or co authored by d g fredlund the substance of these papers documents the milestones of both the science of unsaturated soil mechanics and the career of the author during his tenure as a faculty member in the department of civil engineering at the university of saskatchewan saskatoon canada
