using results from the three rounds of nepal living standard surveys conducted in 1995 2003 and 2010 this study empirically assesses whether access to rented tractors or custom hiring services is a binding constraint on the income growth of farm households in nepal because four wheel tractors of medium horsepower are still the primary suppliers of these tractor services access to these services can be restricted first we investigated the determinants of

the adoption of hired tractors as well as the intensity of their use measured by real annual expenditures on renting tractors results suggest that the adoption and the intensity patterns are generally consistent with the conventional theory of the demand for agricultural mechanization indicating that the supply of these services may be relatively efficient in meeting the demand however adoption is still affected by the presence of tractor owners within the same village district committee indicating that the proximity to tractor service providers may still partly determine accessibility this second point was more formally tested using matching estimators within the terai region of nepal it was found that on average the supply of tractor services might have evolved to a relatively efficient level in the terai so that those who benefited from renting in tractors generally had access to such services however for at least certain segments of farm households in the terai insufficient access to tractor services was still a binding constraint on the growth of farm household incomes the policy implications of these findings are briefly discussed in the last section

although nepal formulated an agricultural mechanization promotion policy in 2014 there is still much to learn about tailoring mechanization policies to different types of farm households the terai belt in nepal has seen steady growth in tractor use in the past 20 years but heterogeneity exists among farm households in this study we use nepal living standards survey data to analyze such heterogeneity from a farm typology perspective we characterize farm households based on use of external agricultural inputs including tractors growth of tractor use in the terai is associated with input use intensification per cultivated area rather than significant expansion of cultivated area tractor use in the terai appears to have grown as part of such land saving intensification although larger farm owners do hire in more tractors we find that differences in household income portfolios are not straightforward between tractor renters and nonrenters without clear differences in specialization of economic activities as well as farming systems tractor renters consist of various types including the power intensive mechanizer intensive labor hirer and fertilizer based intensifier such heterogeneity recommends the use of tailored mechanization policy options

in this study we contribute to such efforts to enhance the use of tractors in africa by describing the key characteristics of markets for tractors in nigeria nigeria is among a set of countries in africa that has both low agricultural productivity and low agricultural mechanization growth malabo montpellier panel 2018 current understanding of the tractor market in nigeria mainly highlights only specific aspects of mechanization issues or only delves into the application of specific emergent mechanization technologies consequently

many stakeholders do not have sufficient understanding of how tractor markets in nigeria are organized both in vertical and in geographic terms

popular science gives our readers the information and tools to improve their technology and their world the core belief that popular science and our readers share the future is going to be better and science and technology are the driving forces that will help make it better

rising labor costs associated with increased rural to urban migration have compelled ghanaian farmers to increase the use of tractors and other agricultural machines to conduct farming operations in the country diao et al 2014 the adoption of these mechanical technologies is consistent with the tendency among ghanaian farmers to save labor rather than embrace practices that create additional labor needs houssou et al 2016 tractor use is concentrated on plowing and other tillage operations primarily houssou et al 2013 but the supply of tractor services is inadequate earlier research estimated that plowing services represent 90 percent of the revenues of tractor service providers houssou et al 2013 both public and private supply of plowing services may have contributed to an expansion of the area under cultivation in ghana thereby exacerbating labor bottlenecks in post tillage field operations for many farmers
