wholeheartedly recommended to every student and user of mathematics this is an extremely original and highly informative essay on algebra and its place in modern mathematics and science from the fields studied in every university maths course through lie groups to cohomology and category theory the author shows how the origins of each concept can be related to attempts to model phenomena in physics or in other branches of mathematics required reading for mathematicians from beginners to experts

the diversity of research domains and theories in the field of mathematics education has been a permanent subject of discussions from the origins of the discipline up to the present on the one hand the diversity is regarded as a resource for rich scientific development on the other hand it gives rise to the often repeated criticism of the discipline s lack of focus and identity as one way of focusing on core issues of the discipline the book seeks to open up a discussion about fundamental ideas in the field of mathematics education that permeate different research domains and perspectives the book addresses transformation as one fundamental idea in mathematics education and examines it from different perspectives transformations are related to knowledge related to signs and representations of mathematics related to concepts and ideas and related to instruments for the learning of mathematics the book seeks to answer the following questions what do we know about transformations in the different domains what kinds of transformations are crucial how is transformation in each case conceptualized

theodore sider presents a broad new vision of metaphysics centred on the idea of structure to describe the world well we must use concepts that carve at the joints so that conceptual

structure matches reality's structure this approach illuminates a wide range of topics such as time modality ontology and the status of metaphysics itself

this book reconceives modern aesthetics by reconstructing its genesis in the 18th century between baumgarten's aesthetics and kant's critique of judgment force demonstrates that aesthetics and hence modern philosophy began twice on the one hand baumgarten's aesthetics is organized around the new concept of the subject as a totality of faculties an agent defined by capabilities one who is able yet an aesthetics in the baumgartian manner as the theory of the sensible faculties of the subject at once faces a different aesthetics the aesthetics of force the latter conceives the aesthetic not as sensible cognition but as a play of expression propelled by a force that rather than being exercised like a faculty does not recognize or represent anything because it is obscure and unconscious the force of what in humanity is distinct from the subject the aesthetics of force is thus a thinking of the nature of man of aesthetic nature as distinct from the culture acquired by practice it founds an anthropology of difference between force and faculty human and subject
