in this historical volume salvatore califano traces the developments of ideas and theories in physical and theoretical chemistry throughout the 20th century this seldom told narrative provides details of topics from thermodynamics to atomic structure radioactivity and quantum chemistry califano's expertise as a physical chemist allows him to judge the historical developments from the point of view of modern chemistry this detailed and unique historical narrative is fascinating for chemists working in the fields of physical chemistry and is also a useful resource for science historians who will enjoy access to material not previously dealt with in a coherent way

the description of quantum systems is fundamental to an understanding of many problems in chemistry and physics this volume records a representative selection of the papers delivered at the second european workshop on quantum systems in chemistry and physics which was held at jesus college oxford april 6-9 1997 the purpose of this international workshop was to bring together chemists and physicists with a common interest the quantum mechanical many body problem and to encourage collaboration and exchange of ideas on the fundamentals by promoting innovative theory and conceptual development rather than improvements in computational techniques and routine applications covers the following topics density matrices and density functional theory electron correlation relativistic effects valence theory nuclear motion response theory condensed matter chemical reactions

at the international summer institute in surface science isiss which is held biennially on the campus of the university of wisconsin milwaukee invited

speakers present tutorial review lectures during the course of one week the majority of the presentations deal with the gas solid interface but now and then relevant reviews concerning liquid solid or solid solid interfaces are included the goal of isiss was outlined in the first isiss publication we recognize that the international summer institute in surface science should foster mutual understanding and interaction among theorists and experimentalists in the various areas of surface science progress can be achieved only when we occasionally peek over the fence into neighboring areas not so much to amuse ourselves that the grass is greener on the other side as to learn from their progress and perhaps equally fruitfully from their limitations and setbacks in addition it is an important task in any field of science to assess take count of what is done and what is more important to point in future directions since the foundation of isiss in 1973 the invited speakers internationally recognized experts in their area of specialization have been asked to write review articles too we wanted in this way to ensure that the largest possible group of scientists could benefit from the special review concept
