projects offers a fresh look at Welles in his full complexity. Rippey trains a postmodern lens on Welles's early projects and reveals four emerging narrative modes that came to define his work: deconstructions of the first person singular, adaptations of classic texts for mass media, explorations of the self via primitivism, and examinations of the line between reality and fiction. These four narrative styles would greatly influence the development of modern mass media entertainment. Rippey finds Welles's legacy alive and well in today's mockumentaries and reality television. It was in early unfinished projects where Welles first toyed with fact and fiction, and the pleasure of this interplay still resonates with contemporary culture, as Rippey suggests. The logical conclusion of Welles's career-long exploration of truthiness lies in the laughs of *Fake News Shows*, offering an exciting glimpse of a master early in his career. *Orson Welles and the Unfinished RKO Projects* documents Welles's development as a storyteller who would shape culture for decades to come.

Mental imagery refers to the mental simulation or recreation of perceptual experience across different sensory modalities. The exploration of mental imagery represents a new and important area within clinical psychology, but arguably one still in its infancy. While mental imagery has featured prominently in recent theoretical accounts of disorders as diverse as post-traumatic stress disorder, phobia, body dysmorphic disorder, mood disorders, and psychosis, there remains an insufficiently strong theoretical and methodological foundation to enable comparison of the role of imagery across such different disorders. The current research topic presents a diverse range of cutting-edge papers focusing on investigating the underlying mechanisms and/or treatment interventions associated with mental imagery in clinical disorders, with the goal of helping establish those common elements most clinically relevant when investigating mental imagery. The research topic comprises fifteen articles drawn from the fields of psychiatry, psychology, and neuroscience. This is a unique collection of articles that combine different perspectives from the field of clinical psychology with more diverse perspectives drawn from the wider literature on mental imagery. The original research studies and theoretical articles presented are organised around four main chapters that cover imagery and eye movements, imagery and craving, imagery and autobiographical memory, and imagery and clinical disorders. We believe that the range of submissions presented in the research topic make a strong contribution to helping establish a theoretical and methodological foundation that can enable the effective study of imagery across different disorders and domains.
