exterranean concerns the extraction of stuff from the earth a process in which matter goes from being sub to exterranean by opening up a rich archive of nonmodern texts and images from across europe this work offers a bracing riposte to several critical trends in ecological thought by shifting emphasis from emission to extraction usher reorients our perspective away from earthrise like globes and shows what is gained by opening the planet to depths within the book thus maps the material and immaterial connections between the earth from which we extract the human and nonhuman agents of extraction and the extracted matter with which we live daily eschewing the self congratulatory claims of posthumanism usher instead elaborates a productive tension between the materially situated homo of nonmodern humanism and the abstract and aggregated anthropos of the anthropocene in dialogue with michel serres bruno latour and other interdisciplinary work in the environmental humanities usher shows what

premodern material can offer to contemporary theory examining textual and visual culture alike usher explores works by ronsard montaigne and rabelais early scientific works by paracelsus and others as well as objects engravings buildings and the salt mines of wieliczka both historicist and speculative in approach exterranean lays the groundwork for a comparative ecocriticism that reaches across and untranslates theoretical affordances between periods and languages

in recent years the perception of indoor radon as a relatively minor health issue has been radically altered observations in sweden canada and the u s have revealed the high incidence of elevated radon levels in ordinary houses and the extreme hazard of inhaling radon decay products these findings have lead to a wide range of activities and intensive research aimed at limiting human exposure to radon this is one of the few books to provide a comprehensive insightful analysis of the radon problem papers reflecting the most current research critically review all major aspects of this issue each providing sufficient detail to be accessible to those who are technically trained but lack prior direct experience coverage includes the generation and migration of radon in source material the physical and chemical behavior of radon current evidence on the health effects and risk of exposure and the strategic and tactical aspects of controlling exposures

fool s gold is a hard hitting account of how and why the biggest mining fraud ever perpetrated by a canadian company was allowed to happen and most shockingly how it could happen again bruce hutchinson charts the unholy alliance which exists in canada among penny stock promoters and investment analysts and he reveals how the financial instruments used by companies to raise money have been seriously abused he shows also how regulatory agencies agencies that exist to protect investors are reluctant to enforce their own rules while irresponsible promotion is rampant and how canadian mining interests have aligned with brutal political regimes to produce environmental degradation and deadly social unrest

this volume focuses on latin america since it was mainly there that europeans or their colonial descendants actually engaged in mining in the 16th 19th centuries elsewhere they traded metals mined by others the principal metals produced and in prodigious quantities were silver in the spanish colonies and gold mainly in brazil in the 18th century these articles analyse the volume and pattern of production and the forms of labour found in mining particular attention is given to the technologies of extraction and refining notably the adoption of the mercury amalgamation process this had a major impact driving down silver production costs because the mercury mines were a royal monopoly it also handed control to the spanish crown
