this book uses the history of cell theory to explore the emergence of biology as a distinct field in its own right separate from anatomy physiology and natural history it also explores nineteenth and twentieth century ideas about heredity and development and the progress that was made at the turn of the century when they began to be studied on their own leading to new understandings of a variety of biological problems from evolution to cancer investigating this story will help readers gain an appreciation of the historical development of scientific ideas it beautifully illustrates that the process of science is not as straightforward as it is usually portrayed one of the important lessons of this intriguing story is that facts do not necessarily speak for themselves and observations always need to be interpreted

was kommt nach dem menschen in donna haraways büchern wimmelt es von cyborgs primaten hunden und tauben die grenze zwischen mensch und maschine sowie zwischen mensch und tier verschwimmt in ihrem neuen großen buch ruft die feministische theoretikerin das zeitalter des chthuluzän aus das eben nicht wie im anthropozän den menschen ins zentrum des denkens und der geschichte stellt sondern das leben anderer arten und kreaturen seien es oktopusse korallen oder spinnen und nicht nur das es sollen neue beziehungen entstehen quer zu vorstellungen biologischer verwandtschaft im zuge dessen setzt sich haraway auch mit dem klimawandel auseinander einmal mehr erweist sie sich als eine originelle und radikale denkerin der gegenwart

the age old debate between science and faith invites more players to the fore in this book proponents of the origin of life as a natural process and natural selection as a mechanism of evolution come face to face with advocates for the intervention of a creator while other scholars believe that the gulf between science and religion should be bridged at turns disconcerting revelatory and profound readers are invited to leave their preconceived notions at the door and join these writers in this curious journey of discovery

during the late 1970s and 1980s cancer underwent a remarkable transformation in one short decade what had long been a set of heterogeneous diseases marked by uncontrolled cell growth became a disease of our genes how this happened and what it means is the story joan fujimura tells in a rare inside look at the way science works and knowledge is created a dramatic study of a new species of scientific revolution this book combines a detailed ethnography of scientific thought an in depth account of science practiced and produced a history of one branch of science as it entered the limelight and a view of the impact of new genetic technologies on science and society the scientific enterprise that fujimura unfolds for us is proto oncogene cancer research the study of those segments of dna now thought to make normal cells cancerous within this framework she describes the processes of knowledge construction as a social enterprise an endless series of negotiations in which theories material technologies and practices are co constructed incorporated and refashioned along the way fujimura addresses long standing questions in the history and philosophy of science culture theory and sociology of science how do scientists create good problems experiments and solutions what are the cultural institutional and material technologies that have to be in place for new truths and new practices to succeed portraying the development of knowledge as a multidimensional process conducted through multiple cultures institutions actors objects and practices this book disrupts divisions among sociology history anthropology and the philosophy of science technology and medicine
