the present book carefully studies the blow up phenomenon of solutions to partial differential equations including many equations of mathematical physics the included material is based on lectures read by the authors at the lomonosov moscow state university and the book is addressed to a wide range of researchers and graduate students working in nonlinear partial differential equations nonlinear functional analysis and mathematical physics contents nonlinear capacity method of s i pokhozhaev method of self similar solutions of v a galaktionov method of test functions in combination with method of nonlinear capacity energy method of h a levine energy method of g todorova energy method of s i pokhozhaev energy method of v k kalantarov and o a ladyzhenskaya energy method of m o korpusov and a g sveshnikov nonlinear schrödinger equation variational method of l e payne and d h sattinger breaking of solutions of wave equations auxiliary and additional results

this book presents a self contained and unified introduction to the properties of analytic functions based on recent research results it provides many examples of functional equations to show how analytic solutions can be found unlike in other books analytic functions are treated here as those generated by sequences with positive radii of convergence by developing operational means for handling sequences functional equations can then be transformed into recurrence relations or difference equations in a straightforward manner their solutions can also be found either by qualitative means or by computation the subsequent formal power series function can then be asserted as a true solution once convergence is established by various convergence tests and majorization techniques functional equations in this book may also be functional differential equations or iterative equations which are different from the differential equations studied in standard textbooks since composition of known or unknown functions are involved
