Kevin Patton divides the lab activities typically covered in a p lab into 42 subunits allowing instructors the flexibility to choose the units and sequence that integrates with lecture material. Basic content is introduced first and gradually more complex activities are developed. Features include procedure check lists, coloring exercises, boxed hints, safety alerts, separate lab reports, and a full color histology mini reference.

The lead author of eight successful previous editions has brought together a team that combined has well over 60 years experience in offering beginning biology labs to several thousand students each year at Iowa State University. Their experience and diverse backgrounds ensure that this extensively revised edition will meet the needs of a new generation of students designed to be used with all majors level general biology textbooks. The included labs are investigative using both discovery and hypothesis based science methods. Students experimentally investigate topics, observe structure, use critical thinking skills to predict and test ideas, and engage in hands on learning. Students are often asked what evidence do you have that in order to encourage them to think for themselves by emphasizing investigative, quantitative, and comparative approaches to the topics. The authors continually emphasize how the biological sciences are integrative yet unique. An instructor's manual available through McGraw Hill Lab Central provides detailed advice based on the authors experience on how to prepare materials for each lab, teachings tips, and lesson plans, and questions that can be used in quizzes and practical exams. This manual is an excellent choice for colleges and universities that want their students to experience the breadth of modern biology.

The AP Laboratory Manual by Allen and Harper presents material covered in the 2 semester undergraduate anatomy physiology laboratory course in a clear and concise way while maintaining a student friendly tone. The manual is very interactive and contains activities and experiments that enhance students ability to both visualize anatomical structures and understand physiological topics. Lab exercises are designed to require students to first apply information they learned and then to critically evaluate it. All lab exercises will be intended to promote group learning and to offer learning experiences for all types of learners: visual, kinesthetic, and auditory. The lab exercises are also written so as to be easily adapted for use in distance learning courses.
