with far reaching implications this urgent treatise promises to revolutionize our understanding of what it means to be human in the digital age we used to say seeing is believing now googling is believing with 24 7 access to nearly all of the world s information at our fingertips we no longer trek to the library or the encyclopedia shelf in search of answers we just open our browsers type in a few keywords and wait for the information to come to us indeed the internet has revolutionized the way we learn and know as well as how we interact with each other and yet this explosion of technological innovation has also produced a curious paradox even as we know more we seem to understand less while a wealth of literature has been devoted to life with the internet the deep philosophical implications of this seismic shift have not been properly explored until now demonstrating that knowledge based on reason plays an essential role in society and that there is much more to knowing than just acquiring information leading philosopher michael patrick lynch shows how our digital way of life makes us overvalue some ways of processing information over others and thus risks distorting what it means to be human with far reaching implications lynch s argument charts a path from plato s cave to shannon s mathematical theory of information to google glass illustrating that technology itself isn t the problem nor is it the solution instead it will be the way in

which we adapt our minds to these new tools that will ultimately decide whether or not the internet of things all those gadgets on our wrists in our pockets and on our laps will be a net gain for humanity along the way lynch uses a philosopher s lens to examine some of the most urgent issues facing digital life today including how social media is revolutionizing the way we think about privacy why a greater reliance on wikipedia and google doesn t necessarily make knowledge more democratic and the perils of using big data alone to predict cultural trends promising to modernize our understanding of what it means to be human in the digital age the internet of us builds on previous works by nicholas carr james gleick and jaron lanier to give us a necessary guide on how to navigate the philosophical quagmire that is the information age

a compelling argument that the internet of things threatens human rights and security sobering and important financial times best books of 2020 technology the internet has leapt from human facing display screens into the material objects all around us in this so called internet of things connecting everything from cars to cardiac monitors to home appliances there is no longer a meaningful distinction between physical and virtual worlds everything is connected the social and economic benefits are tremendous but there is a downside an outage in cyberspace can result not only in loss of communication but also potentially in loss of life control of this infrastructure has become a proxy for political power since countries can easily reach across borders to disrupt real world systems laura denardis argues that the diffusion of the internet into the physical world radically escalates governance concerns around privacy discrimination human safety democracy and national security and she offers new cyber policy solutions in her discussion she makes visible the sinews of power already embedded in our technology and explores how hidden technical governance arrangements will become the constitution of our future

for all the informational convenience the internet offers it is deeply flawed how can it be improved writer ben tarnoff proposes one possibility in this intriguing book which urges

the development of a public lane on the information superhighway it s worth checking out for yourself seth macfarlane why is the internet so broken and what could ever possibly fix it in internet for the people leading tech writer ben tarnoff offers an answer the internet is broken he argues because it is owned by private firms and run for profit google annihilates your privacy and facebook amplifies right wing propaganda because it is profitable to do so but the internet wasn t always like this it had to be remade for the purposes of profit maximization through a years long process of privatization that turned a small research network into a powerhouse of global capitalism tarnoff tells the story of the privatization that made the modern internet and which set in motion the crises that consume it today the solution to those crises is straightforward deprivatize the internet deprivatization aims at creating an internet where people and not profit rule it calls for shrinking the space of the market and diminishing the power of the profit motive it calls for abolishing the walled gardens of google facebook and the other giants that dominate our digital lives and developing publicly and cooperatively owned alternatives that encode real democratic control to build a better internet we need to change how it is owned and organized not with an eye towards making markets work better but towards making them less dominant not in order to create a more competitive or more rule bound version of privatization but to overturn it otherwise a small number of executives and investors will continue to make choices on everyone s behalf and these choices will remain tightly bound by the demands of the market it s time to demand an internet by and for the people now
