the search for an accurate knowledge of the transfer of energy and water in our climate system and of all participating processes is still a burning issue within environmental and climate research more reliable ways should be found to model them in their complex interplay with cascades of processes in that system and their impact on all our resources on earth such modelling needs also validation with accurate and complete observations which in turn should also enable to observe variations of climate components these are the goals of the global energy and water experiment gewex which began its work about 8 years ago many advanced remote sensing capabilities have now been developed of which only a few will enter into satellite based platforms these new developments

should be brought to the attention of a broader community of younger scientists in particular of those countries which quite recently could open their borders for free exchanges

this book presents a comprehensive approach to address the need to improve the design of tailings dams their management and the regulation of tailings management facilities to reduce and eventually eliminate the risk of such facilities failing the scope of the challenge is well documented in the report by the united nations environment program unep and grid arendal entitled mine tailings storage safety is no accident which was released in october 2017 the report recommends that regulators industry and communities should adopt a shared zero failure objective to tailings storage facilities and identifies several areas where further improvements are required in this context the application of cutting edge risk assessment methodologies and risk management practices can contribute to a significant reduction and eventual elimination of dam failures through risk informed decision making as such the book focuses on identifying and describing the risk assessment approaches and risk management practices that need to be implemented in order to develop a way forward to achieve socially acceptable levels of tailings dam risk
