a leading expert on evolution and communication presents an empirically based theory of the evolutionary origins of human communication that challenges the dominant chomskian view human communication is grounded in fundamentally cooperative even shared intentions in this original and provocative account of the evolutionary origins of human communication michael tomasello connects the fundamentally cooperative structure of human communication initially discovered by paul grice to the especially

cooperative structure of human as opposed to other primate social interaction tomasello argues that human cooperative communication rests on a psychological infrastructure of shared intentionality joint attention common ground evolved originally for collaboration and culture more generally the basic motives of the infrastructure are helping and sharing humans communicate to request help inform others of things helpfully and share attitudes as a way of bonding within the cultural group these cooperative motives each created different functional pressures for conventionalizing grammatical constructions requesting help in the immediate you and me and here and now for example required very little grammar but informing and sharing required increasingly complex grammatical devices drawing on empirical research into gestural and vocal communication by great apes and human infants much of it conducted by his own research team tomasello argues further that humans cooperative communication emerged first in the natural gestures of pointing and pantomiming conventional communication first gestural and then vocal evolved only after humans already possessed these natural gestures and their shared intentionality infrastructure along with skills of cultural learning for creating and passing along jointly understood communicative conventions challenging the chomskian view that linguistic knowledge is innate tomasello proposes instead that the most fundamental aspects of uniquely human communication are biological adaptations for cooperative social interaction in general and that the purely linguistic dimensions of human communication are cultural conventions and constructions created by and passed along within particular cultural groups

treatments of human communication mostly draw on cognitive and word centred models to present it as predominantly a matter of words this finnegan argues seriously underestimates the far reaching multi modal qualities of human interconnecting and the senses of touch olfaction and above all audition and vision that we draw on in an authoritative and readable account ruth finnegan brings together research from linguistic and sensory anthropology material culture non verbal communication computer mediated communication and strikingly research on animal communication such as the remarkable gesture systems of great apes she draws on her background in classical studies and her long anthropological experience to present illuminating examples from throughout the world past and present the result is to uncover an amazing array of sounds sights smells gestures looks movements touches and material objects used by humans and other animals to interconnect both nearby and across space and time she goes on to first explore the extra sensory modes of communication now being revealed in the extraordinary new science research and then in an incendiary conclusion to deny the long prevailing story of human history by questioning whether orality really came before literacy whether it was really through the acquisition of language that our prehistoric cave painting ancestors made a sudden leap into being true humans and finally astonishingly to ask whether human communicating had its first roots not after all in verbal language but something else not to be missed this highly original book brings a fresh perspective on among other things that central topic of interest today the dawn of human history and on what being homo sapiens really means this revised and updated edition has additional illustrations updated chapters and a new concluding chapter a provocative and controversial account that will

stir worldwide debate this book is an essential transdisciplinary overview for researchers and advanced students in language and communication anthropology and cultural studies

this book deals with matters of embodiment and meaning in other words the essential components of what continental thought since heidegger has come to consider as communication a critical theme of this book concerns the basic tenet that consciousness of one's self and one's body is only possible through human relationship this is of course the phenomenological concept of intersubjectivity but rather than let this concept remain an abstraction by discussing it as merely a function of language and signs this work attempts to explicate it empirically that is it discusses the manner in which from infancy to childhood and adolescence and the dawning of our sexual identities through physical maturity and old age we come to experience the ecstasy of what merleau ponty has so poetically termed flesh it is rarely clear what someone means when she or he uses the word
