Tsunamis are primarily caused by earthquakes under favourable geological conditions when a large earthquake occurs below the sea bed and the resultant rupture causes a vertical displacement of the ocean bed the entire column of water above it is displaced causing a tsunami in the ocean. Tsunamis do not reach great heights but can travel at velocities of up to 1000 km/hour as a tsunami reaches shallow sea depths there is a decrease in its velocity and an increase in its height. Tsunamis are known to have reached heights of several tens of meters and inundate several kilometres inland from the shore.
