this manual contains fully worked out solutions to select end of chapter questions in the text giving you a way to check your answers

this comprehensive combination resource contains chapter summaries important definitions illustrations of major metabolic pathways self tests detailed solutions to all end of chapter problems and additional problems with answers

this study guide was written to accompany biochemistry by garrett and grisham it includes chapter outlines guides to key points covered in the chapters in depth solutions to the problems presented in the textbook additional problems and detailed summaries of each chapter in addition there is a glossary of biochemical terms and key text figures taken from preface page v

nmr is a growing technique which represents a generalized spread common tool for spectroscopy and for structural and dynamic investigation part of the field of competence of nmr is represented

by molecules with unpaired electrons which are called paramagnetic the presence of unpaired electrons is at the same time a drawback negative effect and a precious source of information about structure and dynamics new phenomena and effects are described which are due to the high magnetic fields and advances in the methodology solution nmr of paramagnetic molecules is unique in dealing with these matters the scope is that of presenting a complete description which is both rigorous and pictorial of theory and experiments of nmr of paramagnetic molecules in solution pertinent examples are described from the time dependent behaviour of electrons in the various metal ions including polimetallic systems to the hyperfine based information and from nmr experiments to constraints for solution structure determination the book s major theme is how to perform high resolution nmr experiments and how to obtain structural and dynamic information on paramagnetic metal ion containing systems
