an important challenge for our world is to understand how cultural understanding and geographical education can be linked and used to improve the global society we readily accept that our world is constituted by numerous groups of people who are organised by committees tribes regions nations or continental entities how these groups interact show concern for each others well being and progress is still an unpredictable activity intercultural tensions racial conflicts and religious clashes have all led to the challenges for

enacting a constructive world fundamental perspectives challenge moderate ones and the resulting tensions produce elements of fear doubt and distrust the extremist views of terrorist groups exaggerate these tensions to the extent that some different cultural groups do not prefer to live in peace with their neighbours deep seated intercultural tensions predominate over peaceful co existence such challenges may easily dominate the interaction between racial groups tribes indigenous peoples and colonisers however we know that through the sound practice of intercultural understanding cultural groups in different contexts around the world can interact and co exist successfully and productively in fact they can work together to seek to improve their society this does not mean that one group will dominate the other rather it means that both groups work together to improve their collective lives education has played an important role in the long term achievement of such harmony this volume has been developed to demonstrate that geographical education can be a potent force in the development of cultural understanding in different societies

country explorers teaching guide

the geography of culture has held a sustained attraction for some of the most distinguished and promising geographers of this century these notable voices have now been brought together to explore the cultural landscape in this fresh encompassing survey of one of geography's most vital research areas

originally published in 1965 and with a second edition in 1970 building upon the original two Madingley Hall seminars for teachers of non university geography in 1965 this book presents an updated research picture of the 1970 transatlantic perspective answering the questions what is happening in geography and what impact does this have on school geography this provided a real link for students who were then making the increasingly difficult transition from school to university geography originally receiving a hostile reaction from british journals the book's diagnosis and prognosis were a forerunner of developments in methodological changes of the discipline this work collects a series of essays delineating geographic concepts in terms of the philosophic underpinnings assessment of the geomorphic system climatology and social economic and historical changing trends techniques are reviewed including quantitative methods for geomorphology and social geography fieldwork both in urban areas and land use surveys and finally in physical planning final analyses examine and contrast the teaching methods and courses in american and british high schools colleges and universities

physical geography is presented more consistently from chapter to chapter with major revisions to several chapters a foldout map of the world in 1900 is included so that comparisons can be made from the beginning to the end of the 20th century website highlights approximately 13 virtual field trips which provide the opportunity for readers to travel virtually to other areas of the world while also developing analytical skills

this book addresses the impact significance and characteristics of the cultural turn in contemporary geography it focuses on the development of the cultural geography subdiscipline and on what has made it a peculiar and unique realm of study it demonstrates the importance of culture in the development of debates in other subdisciplines within geography and beyond in line with these previous themes the significance of space in the production of cultural values and expressions is also developed along with its timely examination of the health of the cultural geographical subdiscipline this book is to be valued for its analysis of the impact of cultural theory on studies elsewhere in geography and of ideas of space and spatiality elsewhere in the social sciences the scope of the book is therefore broad covering work that spans the geographical discipline and even going beyond that to touch on debates in the social sciences and humanities the book's potential readership is also broad the summary chapters which precede each section will appeal to undergraduate students whilst chapters written by individuals leading their fields will be

compulsory reading for researchers at all levels of higher education
