thomas szasz wrote over thirty books and several hundred articles replete with mordant

criticism of psychiatry in both scientific and popular periodicals his works made him arguably one of the world's most recognized psychiatrists albeit one of the most controversial these writings have been translated into several languages and have earned him a worldwide following szasz was a man of towering intellect sweeping historical knowledge and deep rooted mostly libertarian philosophical beliefs he wrote with a lucid and acerbic wit but usually in a way that is accessible to general readers his books cautioned against the indiscriminate power of psychiatry in courts and in society and against the apparent rush to medicalize all human folly they have spawned an eponymous ideology that has influenced to various degrees laws relating to mental health in several countries and states this book critically examines the legacy of thomas szasz a man who challenged the very concept of mental illness and questioned several practices of psychiatrists the book surveys his many contributions including those in psychoanalysis which are very often overlooked by his critics while admiring his seminal contribution to the debate the book will also point to some of his assertions that merit closer scrutiny contributors to the book are drawn from various disciplines including psychiatry philosophy and law and are from various countries including the united states canada new zealand united kingdom and the netherlands some contributors knew thomas szasz personally and spent many hours with him discussing issues he raised in his books and articles the book will be fascinating reading for anyone interested in matters of mental health human rights and ethics

this series provides readers with a real grounding for foundation studies across healthcare disciplines the text demonstrates how theory has a practical application as well as testing student's knowledge

in the 1960s and 1970s a popular diagnosis for america's problems was that society was becoming a madhouse in this intellectual and cultural history michael e staub examines a

time when many believed insanity was a sane reaction to obscene social conditions psychiatrists were agents of repression asylums were gulags for society's undesirables and mental illness was a concept with no medical basis madness is civilization explores the general consensus that societal ills from dysfunctional marriage and family dynamics to the vietnam war racism and sexism were at the root of mental illness staub chronicles the surge in influence of socially attuned psychodynamic theories along with the rise of radical therapy and psychiatric survivors movements he shows how the theories of antipsychiatry held unprecedented sway over an enormous range of medical social and political debates until a bruising backlash against these theories part of the reaction to the perceived excesses and self absorptions of the 1960s effectively distorted them into caricatures throughout staub reveals that at stake in these debates of psychiatry and politics was nothing less than how to think about the institution of the family the nature of the self and the prospects for and limits of social change the first study to describe how social diagnostic thinking emerged madness is civilization casts new light on the politics of the postwar era

the study of social divisions has dominated research within the social sciences since the nineteenth century early stratification categories of class race and gender have in more recent years been joined by issues such as sexuality and disability understanding social divisions addresses the full range of social divisions in one volume while also considering the nature of social division in itself in a comprehensive and accessible overview shaun best outlines and evaluates theories and research from a long historical period looks at how social divisions influence the formation of identity and the other discusses the mechanisms that are drawn upon to maintain social divisions considers how solidarity is maintained given that most people in society may feel in some way divided from the rest of society and explores how individuals place themselves within the social divisions of class gender sex and sexuality race and ethnic diversity disability and mental illness the concluding chapter explores the role of the state in the processes of social division in areas such as asylum citizenship childhood old age disease and policing of terrorism this book is essential reading for students of social divisions from a wide variety of social science backgrounds

using the framework of interest group conflict this text combines a balanced

comprehensive overview of the field of deviance with first hand expertise in the workings of the criminal justice system deviant behavior seventh edition surveys a wide range of topics from explanations regarding crime and criminal behavior measurement of crime violent crime and organizational deviance to sexual behavior mental health and substance abuse this new edition continues its tradition of applying time tested sociological theory to developing social concepts and emerging issues

this book brings together leading international authorities physicians historians social scientists and others who explore the many complex interpretive and ideological dimensions of historical writing about psychiatry the book includes chapters on the history of the asylum freud anti psychiatry in the united states and abroad feminist interpretations of psychiatry s past and historical accounts of nazism and psychotherapy as well as discussions of many individual historical figures and movements it represents the first attempt to study comprehensively the multiple mythologies that have grown up around the history of madness and the origin functions and validity of these myths in our psychological century

there has been an ongoing debate about the capabilities and limits of the bio natural sciences as sources and the methodological measure in the philosophy of psychiatry for quite some time now still many problems remain unsolved at least partly for the following reasons the opposing parties do not tend to speak with each other exchange their arguments and try to increase mutual understanding rather one gets the impression that they often remain in their trenches busy with confirming each others opinions and developing their positions in isolation this leads to several shortcomings 1 good arguments and insights from both sides of the debate get less attention they deserve 2 the further improvement of each position becomes harder without criticism genuinely motivated by the opposing standpoint 3 the debate is not going to stop at least not in the way it would finish

after a suggested solution finds broad support 4 related to this insisting on the ultimate aptness of one side is just plainly wrong in almost every case since undeniably most philosophical positions usually have a grain of truth hidden in them in sum many controversies persist with regard to the appropriate methodological epistemological and even ontological level for psychiatric explanation and therapies in a conference which took place in december last year we tried to contribute to a better understanding about what really is at issue in the philosophy of psychiatry we asked for a common basis for several sides for points of divergence and for the practical impact of different solutions on everyday work in psychiatry since psychiatry as a whole is a subject that is too wide to be covered in a single meeting we focused on the following four core topics 1 competing accounts of psychiatric biologism reductionism and physicalism 2 mental disease and brain disease in the light of current neuroscientific and epigenetic findings 3 normative suppositions for different accounts of mental disease 4 normative implications of different accounts of mental disease these topics which have been vigorously as well as fruitfully discussed at our conference will ideally be too in the center of our contribution to frontiers more precisely we think of arranging a research topic which assembles the issues of the conference at this point it seems promising to us to group three or four target articles together and let them get criticized by a couple of commentaries from different angles to give the issue a much broader and detailed perspective
