the book collects a selection of the papers presented at the meeting held in the context of the joint programme on the links between biological and cultural diversity jp bicud recognizing the inextricable link between biological and cultural diversity the united nations educational scientific and cultural organization unesco and the secretariat of the convention on biological diversity

scbd joined forces and in 2010 launched the joint programme on the links between biological and cultural diversity jp bicud the first meeting for the implementation of the jp bicud was held in florence italy in april 2014 and produced the unesco scbd florence declaration which highlights the concept of biocultural diversity the european rural territory is predominantly a biocultural multi functional landscape providing a crucial and effective space for integration of biological and cultural diversity suggesting the need to revise some of the current strategies for the assessment and management of biodiversity

the field of biocultural diversity is emerging as a dynamic integrative approach to understanding the links between nature and culture and the interrelationships between humans and the environment at scales from the global to the local its multifaceted contributions have ranged from theoretical elaborations to mappings of the overlapping distributions of biological and cultural diversity to the development of indicators as tools to measure assess and monitor the state and trends of biocultural diversity to on the ground implementation in field projects this book is a unique compendium and analysis of projects from all around the world that take an integrated biocultural approach to sustaining cultures and biodiversity the 45 projects reviewed exemplify a new focus in conservation this is based on the emerging realization that protecting and restoring biodiversity and maintaining and revitalizing cultural diversity and cultural vitality are intimately indeed inextricably interrelated published with terralingua and iucn

biodiversity loss is a well known phenomenon over the next thirty years according to most projections 20 percent of the world's species may cease to exist less widely known though attracting increasing attention is the diversity loss that is affecting the world's languages and cultures up to 11 percent of an estimated 6 000 spoken languages in the world today are nearly extinct and as many as 90 percent of those languages may vanish during the course of this century on biocultural diversity brings together an interdisciplinary group of scholars from the social and natural sciences as well as cultural advocates human rights specialists and indigenous experts to discuss the ways in which the losses of biological linguistic and cultural diversity are linked combining research with advocacy this book outlines the threats to the world's diversity explores the connections among its various forms and recommends measures to help preserve and perpetuate the variety of life on earth presenting case studies from africa asia oceania and the americas the contributors show how the loss of linguistic and cultural diversity often involving indigenous peoples removal from their lands suppression of their languages and the loss of traditional environmental knowledge

based on subsistence practices can affect biodiversity the final chapters suggest new directions for research documentation training and action in order to conserve biocultural diversity this collection reveals a broad picture of why diversity matters it offers a common foundation and practical avenues for preserving the wealth of biological life as well as the cultural riches represented by indigenous and minority languages and the knowledge they embody

this lively text offers a unique holistic approach to human diversity for undergraduate courses in fields including anthropology medicine human ecology and general education leading medical anthropologist elisa sobo rises to the challenge of truly integrating biology and culture her inviting writing style and fascinating examples make important new ideas from complexity theory and epigenetics accessible to undergraduates from all disciplines regardless of academic background students learn to conceptualize human biology and culture concurrently as an adaptive biocultural capacity that has helped to produce the rich range of human diversity seen today with clearly structured topics an extensive glossary and suggestions for further reading this text makes a complex interdisciplinary topic a joy to teach

the field of ethnobotany and more generally ethnobiology traces its roots to two distinct research traditions a long standing interest in how human societies around the world make use of plants and animals in their local environments and a more recent mid 1950 s onward interest in how humans perceive classify and name the natural world ethnobotany and conservation of biocultural diversity is based in part on a symposium by the same title held at the sixteenth international botanical congress in saint louis missouri august 1 7 1999 this volume showcases recent ethnobotanical research conducted by members of a new generation of ethnobiologists including case studies from the tropical environments of the amazon basin africa and asia part 1 focuses on the contributions of traditional ecological knowledge and sustainable use of traditional plant resources part 3 deals with ethical issues in ethnobiology

as many as 90 of the 6 000 spoken languages may vanish during the course of this century this vol brings together an interdisciplinary group of scholars to discuss the ways in which the losses of biological linguistic and cultural diversity are linked this book outlines the threats to the world s diversity explores the connections among its various forms and recommends measures to help preserve and perpetuate the variety of life on earth the contributors show how the loss of linguistic and cultural

diversity often involving indigenous people's removal from their lands suppression of their languages and the loss of traditional environmental knowledge based on subsistence practices can affect biodiversity

this book is devoted to the cultural and biological dimensions and values of landscapes linking the concepts of biodiversity landscape and culture and presenting an essential approach for landscape analysis interpretation and sustainable dynamics early chapters explore the concepts and values of biocultural landscapes before addressing the methodology to identify the relationship between biological and cultural diversity the volume continuous with a series of case studies and with an exploration of the key role of biocultural diversity in contemporary landscape ecology readers will learn the importance of landscapes for different fields of natural and human sciences and are confronted to the trans disciplinary nature of the landscape concept itself a hierarchical approach to landscapes in which they are composed of interacting eco systems is shown to be essential in recognizing their emergent properties in this work the biocultural values of landscapes are explored through their diversity in geographical scopes methodological approaches and conceptual assumptions authors from asia europe and north america present diverse research experiences and views on biocultural landscapes their pattern conservation and management landscape ecologists will find this work particularly appealing as well as anyone with an interest in sustainable landscape development nature conservation or cultural heritage management this volume is the outcome of a symposium on biodiversity in cultural landscapes organized in the framework of the 8th iale world congress held in beijing in 2011

first published in 2010 routledge is an imprint of taylor francis an informa company

weaving together philosophical historical legal scientific and personal viewpoints this book gives a rich sample of the vast web which makes up our cultural spiritual and social diversity the volume highlights the central importance of cultural and spiritual values in the appreciation and preservation of all life and argues that these values give us a true reflection of worth it demonstrates how many cultures see nature as an extension of society and how sensitive stewardship is an integral part of existence the book covers language and how cognition and speech encode indigenous knowledge systems are critical for preservation of diversity the complex issue of indigenous people and the problems of preserving their relationships both with and within their societies voices of the world expressions of concern and disquiet over the declining world diversity holistic

health practices where environment and diet are integrated into indigenous medical health systems the importance of developing effective intellectual property rights and territorial and land rights to enhance and maintain local control this book arose out of the global biodiversity assessment gba a massive review of current knowledge in the broad field of biological diversity commissioned by united nations environmental programme unep

david harmon takes a unique approach to answering this essential question by drawing on insights from conservation biology evolutionary theory linguistics geography psychology philosophy and ethics his interconnected discussion explores the works of voltaire a o lovejoy darwin wittgenstein william james dobzhansky and many other to explain why everyone must be concerned about the loss of diversity when more and more elemental differences are erased from the natural world and human societies the field of possible experience becomes more constricted and our essential humanity becomes jeopardized book jacket

the second section of the text separateley covers disease of the north american indians latin america the japanese the chinese finland and scandinavia britain and western europe eastern europeans black africans the jews isolated groups and aging populations illustrations and tabular data are presented throughout the text and literature citations are appended to each text chapter

the most comprehensive collection of papers in the field to date this volume presents state of the art research and commentary from more than fifty of the world s leading ethnobiologists covering a wide range of ecosystems and world regions the papers center on global change and the relationships among traditional knowledge biological diversity and cultural diversity specific themes include the acquisition persistence and loss of traditional ecological knowledge intellectual property rights and benefits sharing ethnobiological classification medical ethnobotany ethnoentomology ethnobiology and natural resource management homegardens and agriculture and traditional knowledge the volume will be of interest to scholars in anthropology ecology and related fields and also to professionals in conservation and indigenous rights organizations

to assess the social processes of globalization that are changing the way in which we co inhabit the world today this book invites the reader to essay the diversity of worldviews with the diversity of ways to sustainably co inhabit the planet with a biocultural perspective that highlights planetary ecological and cultural heterogeneity this book examines three interrelated themes 1

biocultural homogenization a global but little perceived driver of biological and cultural diversity loss that frequently entail social and environmental injustices 2 biocultural ethics that considers ontologically and axiologically the complex interrelationships between habitats habitats and co inhabitants that shape their identity and well being 3 biocultural conservation that seeks social and ecological well being through the conservation of biological and cultural diversity and their interrelationships
