at the beginning of the 20th century kristian birkeland 1867 1917 a norwegian scientist of insatiable curiosity addressed questions that had vexed european scientists for centuries why do the northern lights appear overhead when the earth s magnetic field is disturbed how are magnetic storms connected to disturbances

on the sun to answer these questions birkeland interpreted his advance laboratory simulations and daring campaigns in the arctic wilderness in the light of maxwell's newly discovered laws of electricity and magnetism birkeland's ideas were dismissed for decades only to be vindicated when satellites could fly above the earth's atmosphere faced with depleting stocks of chilean saltpeter and the consequent prospect of mass starvation birkeland showed his practical side inventing the first industrial scale method to extract nitrogen based fertilizers from the air norsk hydro one of modern norway's largest industries stands as a living tribute to his genius hoping to demonstrate what we now call the solar wind birkeland moved to egypt in 1913 isolated from his friends by the great war he yearned to celebrate his 50th birthday in norway the only safe passage home via the far east brought him to tokyo where he passed away in the late spring of 1917

when i was a child growing up in south america i often went camping in the wild and hence had direct access to the wondrous southern sky the southern cross was all mine at the time little did i know then that the study of the sky would take such a huge importance in my life and that in the end astronomy and astrophysics would in many ways become my country and my religion i have lived in several different countries and when asked my nationality i am always very tempted to reply astronomer i started as a theorist and my only dream in my youth was to spend nights thinking and calculating with paper and pencil and to have the impression by dawn that i had understood something new so at the time astronomy was seen or dreamt by me as a solitary endeavour with periodic encounters with my wise adviser and professors it is this model that i adopted when doing my phd work my generation has lived through many revolutions of all kinds those in astronomy i believe remain particularly remarkable and i am a true product of them now i elect to live and work in large organizations and to share my endeavours with many people and i relish the series of andr e heck on organizations and strategies in astronomy which help us recover our memories reconstitute our own story and read with glee about our neighbouring or far away colleagues

this book presents studies of complexity in the context of nonequilibrium phenomena using theory modeling simulations and experiments both in the laboratory and in nature

it was with pleasure that caup became for three days the core to the cloud of star formation experts all over the world close to the celebration of its 15th anniversary therefore still in the early stages of institutional evolution we are proud of our multiple activities in astronomy a productive research centre classi ed as institution of excellence within the portuguese research units but also an institution of public utility as recognised by the government fifteen years ago we choose to play a role not only in research as expected from any research centre but also in the training of the future astronomers and the promotion of science and scienti c culture this choice is clearly stated in our by laws and also in the multiple activities we have carried out since along the years we have organized on a regular basis international workshops similar to cores to clusters sometimes we have chosen to organize int national conferences of a larger size on other occasions the choice has been for smaller and more informal discussion meetings or even doctoral schools with very different objectives in common all those meetings have always had besides the formal registered participants a group of informal participants our undergraduate students of astronomy so eager to be in touch with the real world
