das lehrbuch behandelt adaptive algorithmen für die numerische lösung von elliptischen und parabolischen gleichungen wobei der schwerpunkt auf der algorithmischen effizienz liegt und die notwendige theorie so elementar wie möglich gehalten wird die zweite ausgabe wurde korrigiert und um eine constraints basierte formulierung der dirichlet randbedingungen und einen abschnitt über spektrale verzögerte korrekturmethode erweitert

this monograph provides the theoretical foundations needed for the construction of fundamental solutions and fundamental matrices of systems of linear partial differential equations many illustrative examples also show techniques for finding such solutions in terms of integrals particular attention is given to developing the fundamentals of distribution theory accompanied by calculations of fundamental solutions the main part of the book deals with existence theorems and uniqueness criteria the method of parameter integration the investigation of quasihyperbolic systems by means of fourier and laplace transforms and the representation of fundamental solutions of homogeneous elliptic operators with the help of abelian integrals in addition to rigorous distributional derivations and verifications of fundamental solutions the book also shows how to construct fundamental solutions matrices of many physically relevant operators systems in elasticity thermoelasticity hexagonal cubic elastodynamics for maxwell s system and others the book mainly addresses researchers and lecturers who work with partial differential equations however it also offers a

valuable resource for students with a solid background in vector calculus complex analysis and functional analysis

this volume covers some of the most seminal research in the areas of mathematical analysis and numerical computation for nonlinear phenomena collected from the international conference held in honor of professor yoshikazu giga s 60th birthday the featured research papers and survey articles discuss partial differential equations related to fluid mechanics electromagnetism surface diffusion and evolving interfaces specific focus is placed on topics such as the solvability of the navier stokes equations and the regularity stability and symmetry of their solutions analysis of a living fluid stochastic effects and numerics for maxwell s equations nonlinear heat equations in critical spaces viscosity solutions describing various kinds of interfaces numerics for evolving interfaces and a hyperbolic obstacle problem also included in this volume are an introduction of yoshikazu giga s extensive academic career and a long list of his published work students and researchers in mathematical analysis and computation will find interest in this volume on theoretical study for nonlinear phenomena
