this book discusses a variety of topics related to industrial and applied mathematics focusing on wavelet theory sampling theorems inverse problems and their applications partial differential equations as a model of real world problems computational linguistics mathematical models and methods for meteorology earth systems environmental and medical science and the oil industry it features papers presented at the international conference in conjunction with 14th biennial conference of isiam held at guru nanak dev university amritsar india on 2 4 february 2018 the conference has emerged as an influential forum bringing together prominent academic scientists experts from industry and researchers the topics discussed include schrodinger operators quantum kinetic equations and their application extensions of fractional integral transforms electrical impedance tomography diffuse optical tomography galerkin method by using wavelets a cauchy problem associated with korteweg de vries equation and entropy solution for scalar conservation laws this book motivates and inspires young researchers in the fields of industrial and applied mathematics

this book contains a multitude of challenging problems and solutions that are not commonly found in classical textbooks one goal of the book is to present these fascinating mathematical problems in a new and engaging way and illustrate the connections between integrals sums and series many of which involve zeta functions harmonic series polylogarithms and various other special functions and constants throughout the book the reader will find both classical and new problems with numerous original problems and solutions coming from the personal research of the author where classical problems are concerned such as those given in olympiads or proposed by

famous mathematicians like ramanujan the author has come up with new surprising or unconventional ways of obtaining the desired results the book begins with a lively foreword by renowned author paul nahin and is accessible to those with a good knowledge of calculus from undergraduate students to researchers and will appeal to all mathematical puzzlers who love a good integral or series

this book features challenging problems of classical analysis that invite the reader to explore a host of strategies and tools used for solving problems of modern topics in real analysis this volume offers an unusual collection of problems many of them original specializing in three topics of mathematical analysis limits series and fractional part integrals the work is divided into three parts each containing a chapter dealing with a particular problem type as well as a very short section of hints to select problems the first chapter collects problems on limits of special sequences and riemann integrals the second chapter focuses on the calculation of fractional part integrals with a special section called quickies which contains problems that have had unexpected succinct solutions the final chapter offers the reader an assortment of problems with a flavor towards the computational aspects of infinite series and special products many of which are new to the literature each chapter contains a section of difficult problems which are motivated by other problems in the book these open problems may be considered research projects for students who are studying advanced calculus and which are intended to stimulate creativity and the discovery of new and original methods for proving known results and establishing new ones this stimulating collection of problems is intended for undergraduate students with a strong background in analysis graduate students in mathematics physics and engineering researchers and anyone who works on topics at the crossroad between pure and applied mathematics moreover the level of problems is appropriate for students involved in the putnam competition and other high

level mathematical contests
