this book is ideal for use in a one semester introductory course in physical chemistry for students of life sciences the author s aim is to emphasize the understanding of physical concepts rather than focus on precise mathematical development or on actual experimental details subsequently only basic skills of differential and integral calculus are required for understanding the equations the end of chapter problems have both physiochemical and biological applications

the first meeting in this series was organized by prof pawlowski and dr lacy in 1976 at the marie curie sklodowska university in lublin poland the conference dealt with various physicochemical methodologies for water and wastewater treatment research projects that

were jointly sponsored by us ep a and poland the great interest expressed by the participants led the organizers to expand the scope of the second conference which was also held in poland in september 1979 the third and enlarged symposium was again successfully held in 1981 in lublin poland at that time the participating scientists and engineers expressed their desire to broaden the coverage as well as the title of the conference series the international committee approved the title chemistry for the protection of the environment and designated that date of the fourth conference cpe iv which was convened in september 1983 at the paul sabatier university in toulouse france and was hosted and arranged by prof a verdier this conference series included participants from various government agencies academia and the private sector representing industrialized countries as well as emerging nations both the east and west in an independent non politica forum
