in light of the increasing disengagement between urban and rural areas this book address the interdependency of cities with ecological and technological processes outside the purview of traditional urban planning it compiles a huge amount of essays in regards to the most important topics that cities must address today such as their connection with global data networks ecological cycles of resources which supersede the traditional boundaries of urbanism for this reason it frames investigation of contemporary urbanism on nine imminent commons grouping the urban commons into resources and technologies lead us to the arcane classification of natural resources air water fire and earth the four elements of ancient cosmologies and five basic technological commons based on expanded human capacities sensing communicating moving making and recycling

this book provides for the first time a comprehensive overview of the fundamental roles that ecological interactions play in extinction processes bringing to light an underground of hidden pathways leading to the same dark place biodiversity loss we are in the midst of the sixth mass extinction we see species declining and vanishing one after another poached rhinos dolphins and whales slaughtered pandas surviving only in captivity are strong emotional testimonials of what is happening yet the main threat to natural communities may be overshadowed by the disappearance of large species with most extinctions happening unnoticed and involving less eye catching organisms such as parasites and pollinators ecosystems hide countless invisible wires connecting organisms in dense networks of ecological interactions through these networks perturbations can propagate from one species to another producing unpredictable effects in worst case scenarios the loss of one species might doom many others to extinction ecologists now consider such mechanisms as a fundamental and still poorly understood driver of the ongoing biodiversity crisis hidden pathways to extinction makes the invisible links connecting the fates of species and organisms evident exploring why complexity can enhance ecosystem stability and yet accelerate species loss page after page strona provides convincing evidence

that we are primarily responsible for the fall in biodiversity that we are falling too and that we need to redouble our conservation efforts now or it won't be long before we hit the ground
