this book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the geodetic observatory wettzell germany it starts with a step by step introduction to developing stable and safe scientific software to run successful software projects the use of software toolboxes is another essential aspect that leads to the application of generative programming an example is a generative network middleware that simplifies communication one of the book s main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques the complete software design of a satellite laser ranging system is taken as an example such automated systems are then combined for global interaction using secure communication tunnels for remote access the network of radio telescopes is used as a reference combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the global geodetic observing system ggos with regard to industry 4 0

low emission hydrogen is expected to play an important role in the energy transition to tackle the climate crisis it can decarbonate hard to abate sectors still relying on fossil fuels turn low carbon electricity into a fuel that can be transported using pipelines and provide a green transport alternative in particular for heavy duty and long distance transport

the anaerobic process is considered to be a sustainable technology for organic waste treatment mainly due to its lower energy

consumption and production of residual solids coupled with the prospect of energy recovery from the biogas generated however the anaerobic process cannot be seen as providing the complete solution as its treated effluents would typically not meet the desired discharge limits in terms of residual carbon nutrients and pathogens this has given impetus to subsequent post treatment in order to meet the environmental legislations and protect the receiving water bodies and environment this book discusses anaerobic treatment from the perspective of organic wastes and wastewaters municipal and industrial followed by various post treatment options for anaerobic effluent polishing and resource recovery coverage will also be from the perspective of future trends and thoughts on anaerobic technologies being able to support meeting the increasingly stringent disposal standards the resource recovery angle is particularly interesting as this can arguably help achieve the circular economy it is intended the information can be used to identify appropriate solutions for anaerobic effluent treatment and possible alternative approaches to the commonly applied post treatment techniques the succeeding discussion is intended to lead on to identification of opportunities for further research and development this book can be used as a standard reference book and textbook in universities for master and doctoral students the academic community relevant to the subject namely faculty researchers scientists and practicing engineers will find the book both informative and as a useful source of successful case studies
