18 apr 2013    311 a bit of explaining as to what that 2520 is the common space character is encoded as 20 as you noted yourself the character is encoded as 25 the way you get

sometimes the spaces get url encoded to the sign and some other times to 20 what is the difference and why should this happen

metabyter i think it is more technically correct to phrase the question as in a url should i encode the spaces using 20 or in the query part of a url because while the example you show

10                  hold                                  20                                  20                  24

14 dez 2019    i am interested in knowing why 20 is used as a space in urls particularly why 20 was used and why we even need it in the first place
