countries which take spatial planning seriously should take planning law and property rights also seriously there is an unavoidable logical relationship between planning law and property rights however planning by law and property rights is so familiar and taken for granted that we do not think about the theory behind it as a result we do not think abstractly about its strengths and weaknesses about what can be achieved with it and what not how it can be improved how it could be complemented such reflections are essential to cope with current and future challenges to spatial planning this book makes the often implicit theory behind planning by law and property rights explicit and relates it to those challenges it starts by setting out what is understood by planning by law and property rights and investigates theoretically and by game simulation the relationships between planning law and property rights it then places planning law and property rights within their institutional setting at three different scales when a country undergoes enormous social and political change when there is fundamental political debate about the power of the state within a country

and when a country changes its legislation in response to european policy not only changing institutions but also global environmental change pose huge challenges for spatial planning the book discusses how planning by law and property rights can respond to those challenges by adaptive planning by adaptable property rights and by public policies at the appropriate geographical level planning by law and property rights can fix a local regime of property rights which turns out to be inappropriate but difficult to change it questions whether such regimes can be changed and whether planning agencies can make such undesirable lock ins less likely by reducing market uncertainty and if so by what means
