this book introduces to 1 dimensional flow arrays and bifurcations in planar polynomial systems the 1 dimensional source sink and saddle flows are discussed as well as the 1 dimensional parabola and inflection flows the singular source sink and saddle flows are the appearing and switching bifurcations for simple sink and source flow arrays and for lower order singular source sink and saddle flow arrays the singular parabola and inflection flows are the appearing and switching bifurcations for simple parabola arrays and also for lower order singular parabola and inflection flow arrays the infinite equilibria in single variable polynomial systems are also discussed which are the appearing and switching bifurcations of hybrid arrays of source sink and saddle flows with parabola and inflections this book helps readers understand the global dynamics of planar polynomial systems and the hilbert sixteen problem

originating from research in the qualitative theory of ordinary differential equations this book follows the authors work on structurally stable planar quadratic polynomial differential systems in the present work the authors aim at finding all possible phase portraits in the poincaré disc modulo limit cycles of planar quadratic polynomial differential systems manifesting the simplest level of structural instability they prove that there are at most 211 and at least 204 of them

this book is essentially devoted to complex properties phase plane structure and bifurcations of two dimensional noninvertible maps i e maps having either a non unique inverse or no real inverse according to the plane point they constitute models of sets of discrete dynamical systems encountered in engineering control signal processing electronics physics economics life sciences compared to the studies made in the one dimensional case the two dimensional situation remained a long time in an underdeveloped state it is only since these last years that the interest for this research has increased therefore the book purpose is to give a global presentation of a matter available till now only in a partial form fundamental notions and tools such as critical manifolds as the most part of results are accompanied by many examples and figures
