this book makes it easy for you to find what effect environment has on the corrosion of metals and alloys however this volume offers information on additional environments including concrete soil groundwater distilled water sodium acetate and more thereas also updated and expanded coverage of previously discussed environments as well as information on environments which deal with the dairy food brewing aerospace petrochemical and building

industries the environments are listed alphabetically each listing includes a general description of the conditions a comment on the corrosion characteristics of various alloys in such a situation a bibliography of recent articles specific to the environment tables consolidating and comparing corrosion rates at various temperatures and concentrations for various alloys and graphical information also included are summaries on the general corrosion characteristics of major metals and alloys

this complete revision of applied process design for chemical and petrochemical plants volume 1 builds upon ernest e ludwig s classic text to further enhance its use as a chemical engineering process design manual of methods and proven fundamentals this new edition includes important supplemental mechanical and related data nomographs and charts also included within are improved techniques and fundamental methodologies to guide the engineer in designing process equipment and applying chemical processes to properly detailed equipment all three volumes of applied process design for chemical and petrochemical plants serve the practicing engineer by providing organized design procedures details on the equipment suitable for application selection and charts in readily usable form process engineers designers and operators will find more chemical petrochemical plant design data in volume 2 third edition which covers distillation and packed towers as well as material on azeotropes and ideal non ideal systems volume 3 third edition which covers heat transfer refrigeration systems compression surge drums and mechanical drivers a kayode coker is chairman of chemical process engineering technology department at jubail industrial college in saudi arabia he s both a chartered scientist and a chartered chemical engineer for more than 15 years and an author of fortran programs for chemical process design analysis and simulation gulf publishing co and modeling of chemical kinetics and reactor design butterworth heinemann provides improved design manuals for methods and proven fundamentals of process design with related data and charts covers a complete range of basic day to day petrochemical operation topics with new material on significant industry changes since 1995

this text identifies the need for effective steam trapping and discusses the interface between steam energy and the thermodynamics of steam and condensate

the second edition of kosher food production explores the intricate relationship between modern food production and related kosher application following an introduction to basic kosher laws theory and practice rabbi blech details the essential food production procedures required of modern food plants to meet

kosher certification standards chapters on kosher application include ingredient management rabbinic etiquette kosher for passover and the industries of fruits and vegetables baking biotechnology dairy fish flavor meat and poultry oils fats and emulsifiers and food service new to this edition are chapters covering kosher application in the candy and confections industries and the snack foods industry a collection of over 50 informative commodity specific essays specifically geared to the secular audience of food scientists then follows giving readers insight and understanding of the concerns behind the kosher laws they are expected to accommodate several essays new to the second edition are included kosher food production second edition serves as an indispensable outline of the issues confronting the application of kosher law to issues of modern food technology

this guide examines practical applications and presents examples for conserving energy and reducing energy costs in commercial institutional and industrial plants and facilities registered mechanical engineer mull provides an introduction to the basic scientific principles and economics of energy management then commonly used energy consuming equipment and systems are profiled some of the topics covered include steam and hydronic boilers and pumping chilled water air distribution hvac electrical lighting compressed air refrigeration heat recovery cogeneration energy management and thermal storage systems c book news inc

this book was written to assist plant engineers and technicians in the areas of cost effective steam distribution and condensate systems management including the reduction of toxic waste by products as now required by government standards the fully illustrated presentation offers proven engineering and management techniques for simultaneously reducing steam waste fuel consumption and toxic wastes thereby resulting in significant long term cost savings you ll find detailed coverage of the steam and condensate piping structure layout excavations and enclosures system protection thermal insulation valves valve drive mechanisms controls and metering and steam traps

working guide to process equipment 2nd ed carefully and clearly explains all the basic technical issues that you need to know to trouble shoot most process equipment problems this guide contains a wealth of useful diagnostic tips worked out calculations practical examples and informative illustrations to help you quickly pinpoint trouble and repair typical malfunctions in trayed and packed distillation towers natural and forced reboilers partial and total condensers steam systems and deaerators vaccuum systems fired heaters shell and tube heat exchangers centrifugal compressors gas turbines and reciprocating engines centrifugal pumps and motor drivers in no time at all this essential problem solving manual will become your most trusted on the job tool for dealing
